2.5.1    Coding.....	10
2.5.2    Local communication .....	11
2.5.3    Remote Communication .....	11
2.5.4    Supported functions .....	11
<b>3. STATUS WORDS.....</b>	<b>13</b>
3.1 <b>DIGITAL OUTPUT .....</b>	<b>13</b>
3.1.1    Alarm relay status word .....	13
3.1.2    Pulse output status word .....	13
3.1.3    Digital output status word (Alarm & Forcing) .....	13
3.2 <b>DIGITAL INPUT .....</b>	<b>13</b>
3.3 <b>ANALOGUE OUTPUTS .....</b>	<b>14</b>
3.4 <b>ANALOGUE INPUTS.....</b>	<b>14</b>
3.5 <b>ALARMS.....</b>	<b>14</b>
<b>4. COMMAND WORDS.....</b>	<b>15</b>
4.1 <b>FOREWORD .....</b>	<b>15</b>
4.2 <b>SYSTEM PARAMETERS.....</b>	<b>15</b>
4.2.1    Modification of system date / time .....	15
4.3 <b>RS485 COMMUNICATION PARAMETERS .....</b>	<b>15</b>
4.3.1    Slave number.....	15
4.3.2    RS485 data rate.....	15
4.3.3    RS485 parity .....	15
4.3.4    Number of RS485 stop bits.....	15
4.3.5    Response time (timeout - used in RTU mode) .....	16
4.3.6    Mode (RTU or ASCII) .....	16
4.3.7    Data bits.....	16
4.3.8    Timeout (used in ASCII mode) .....	16
4.3.9    All RS485 parameters.....	16

<b>4.4</b>	<b>ETHERNET COMMUNICATION PARAMETERS.....</b>	<b>17</b>
4.4.1	Device IP Address .....	17
4.4.2	Gateway IP address .....	17
4.4.3	Subnet mask.....	17
4.4.4	All Ethernet parameters .....	17
<b>4.5</b>	<b>HMI.....</b>	<b>17</b>
4.5.1	Language .....	17
4.5.2	Automatic scrolling.....	17
4.5.3	Pause time .....	18
4.5.4	List of scrolling screens .....	18
4.5.5	Custom screens .....	18
4.5.6	Changing the password .....	19
4.5.7	Value of the contrast and backlight of the LCD .....	19
4.5.8	Display a specific screen .....	19
4.5.9	Value of the backlight in standby mode .....	19
<b>4.6</b>	<b>ALARMS.....</b>	<b>19</b>
4.6.1	Configuration of an elementary alarm .....	19
4.6.2	Configuration of a global alarm.....	20
4.6.3	Reset of the alarms.....	20
4.6.4	Reset of the alarms buffer .....	20
4.6.5	Reset of the alarm status word.....	21
4.6.6	Global alarm labelling .....	21
4.6.7	Reset of the timeouts of elementary alarms .....	21
4.6.8	Setting of parameters for blinking of backlight.....	21
4.6.9	Alarms FIFO.....	21
<b>4.7</b>	<b>DIGITAL OUTPUTS .....</b>	<b>21</b>
4.7.1	Configuration of a digital output board.....	21
4.7.2	Minimum width of pulses .....	22
4.7.3	Forced control of a digital output .....	22
4.7.4	Reset of the pulse outputs.....	22
<b>4.8</b>	<b>METROLOGY.....</b>	<b>22</b>
4.8.1	Primary PT .....	22
4.8.2	Secondary PT .....	23
4.8.3	Primary CT .....	23
4.8.4	Secondary CT .....	23
4.8.5	Line frequency (50-60Hz products only).....	23
4.8.6	Period of integration of the average .....	23
4.8.7	Initialisation of the Energies Index .....	23
4.8.8	Reset of the minima.....	24
4.8.9	Reset of the maxima.....	24
4.8.10	Reset of the averages.....	24
4.8.11	Reset of the energies .....	24
4.8.12	Reset of all time counters .....	24
4.8.13	Reset of the operating time counter .....	24
4.8.14	Reset of the voltage-present time counter.....	24
4.8.15	Reset of the current-present time counter .....	24
4.8.16	Initialisation of the operating time counter .....	24
4.8.17	Initialisation of the voltage-present time counter .....	24
4.8.18	Initialisation of the current-present time counter.....	24
4.8.19	Choice of type of wiring 3 or 4-wire .....	25
4.8.20	Primary CT IN .....	25
4.8.21	Secondary CT IN .....	25
4.8.22	Calculation of neutral current.....	25
4.8.23	Declared voltage Uc (300 and 310 only)	25
<b>4.9</b>	<b>RECORDING CURVES .....</b>	<b>25</b>
4.9.1	Configuration of recording curves.....	25
4.9.2	Reading of a recording curve.....	26
4.9.3	Stopping a recording curve.....	26

4.9.4	Erasing a recording curve .....	26
<b>4.10</b>	<b>LOAD CURVES .....</b>	<b>26</b>
4.10.1	Configuration of Load Curve .....	26
4.10.2	Reading of Load Curve .....	27

## 1. FOREWORD

- ❑ The information in this document is intended solely for programmers who wish to use the information measured and stored by ENERIUM type 100/200 power monitor, with a view to use by a supervision and/or energy management system, using an RS-485 field bus with the Modbus protocol in RTU or ACSII mode, or an Ethernet network with the Modbus/TCP protocol in RTU mode.
- ❑ **The mapping complies with the "Modbus protocol & mapping standard" document, version 1.6**
- ❑ The following chapter provides a short introduction to the MODBUS protocol used by the ENERIUM type 100/200/300 monitor, to configure and use the product.
- ❑ Full protocol specifications are available on the website <http://www.MODBUS.org>.
- ❑ **This document is intended for experienced users who are familiar with the MODBUS protocol and who have already used MODBUS drivers.**

## 2. INTRODUCTION TO MODBUS

### 2.1 DEFINITIONS

- The MODBUS protocol (trademark registered by MODICON) is a dialogue protocol based on a hierarchical structure of the "client / server" or "master / slave" type between devices connected by a bus (e.g.: RS-485) or a network (e.g.: Ethernet).

- The master sends a query and waits for a response. Two slaves cannot interact directly. The master / slave dialogue can be represented schematically in the form of successive point-to-point links
- Note the terminology: the master device is also called a MODBUS Client and the slave device is called a MODBUS Server.

### 2.2 VARIANTS OF THE PROTOCOL

- There are different transmission modes:
  - RTU: (Remote Terminal Unit); data is coded using the natural hexadecimal system
  - ASCII (American Standard Code for Information Interchange), in which each byte is coded as two ASCII characters.

### 2.3 PHYSICAL (TRANSPORT) LAYER

#### 2.3.1 RS-485 Bus

- When the term MODBUS is used alone, or MODBUS/ASCII or MODBUS/RTU, the physical layer is generally an RS-485 multi-point link. In this case, two rules must be followed:
  - The master communicates with a slave and waits for a response.
  - The master communicates with all slaves, without waiting for a response (broadcasting).
- In this case, the communication is described as "half-duplex", and data cannot be sent and received at the same time.

#### 2.3.2 Over an Ethernet network

- For an Ethernet-type network, the Modbus/TCP protocol is used, which is a minor variation on the standard Modbus, with Modbus frames encapsulated in TCP/IP frames. Therefore, the slave address is no longer used, because there is another way to identify the product on the network: the IP address.

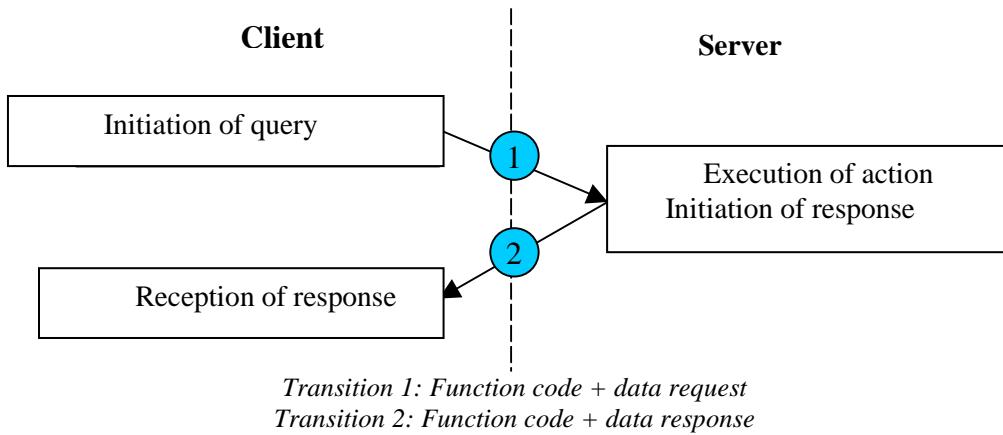

#### 2.3.3 Optical link

- The Enerium 100/200 has a USB optical head enabling exactly the same Modbus operations to be conducted as through an RS-485 or Ethernet network. In this case it is not a bus but a point-to-point link. That is why any slave address may be used (see below), to communicate through the front panel.

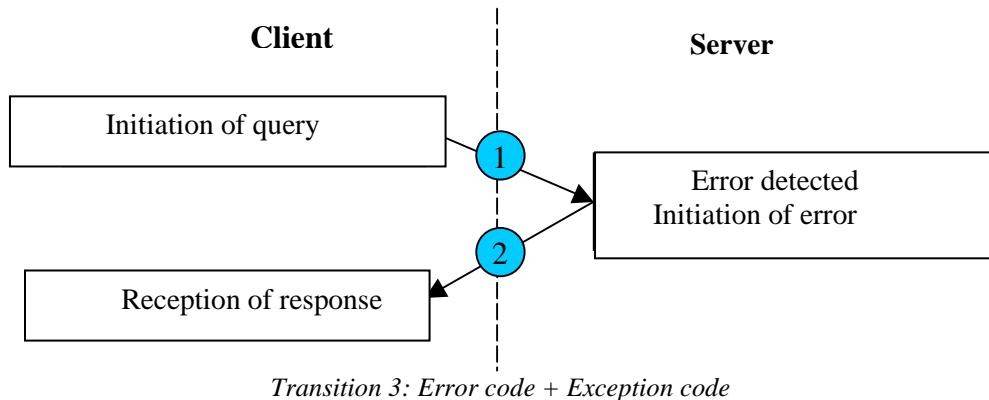

## 2.4 DESCRIPTION OF THE PROTOCOL

### 2.4.1 MODBUS Transactions

- A client sends a query to the server. The server carries out the action related to the query and prepares a response. The server then returns the response and the client receives the response from the server.

- The server may detect an error when receiving the client query, or while it is being processed. In this case, an exception is sent back to the client.

### 2.4.2 MODBUS/RTU/ASCII addressing

- The slave address is between 1 and 247.
- The address 0 is reserved for "broadcast" messages (a message addressed to several devices of the same bus).
- The addresses from 248 to 255 are reserved.
- Two clients cannot have the same address.

### 2.4.3 In Modbus/TCP

- Addressing is left to the TCP/IP layer, so a specific slave can be chosen thanks to its IP address.

#### 2.4.4 MODBUS/RTU frames

- The data of the frame is coded in Big Endian format (high-order bits first). The maximum size of a MODBUS/RTU frame is 255 bytes. Therefore, the maximum number of words which can be read (function 3) is 125, and the maximum number of words which can be sent (function 16) is 123.
- Query
  - The first byte contains the number of the slave to which the frame is sent.
  - The second byte contains a function code telling the slave addressed what type of action is requested.
  - The data contains additional information which the slave needs to execute this function.
  - The check bytes field enables the slave to check the full content of the query. In MODBUS, the error check takes the shape of a 16-bit CRC with a polynomial with a value of 0xA001. It should be noted that the two check bytes are transmitted in Little Endian format.

Slave No.	Function code	Specific information about the request	Check bytes
1 byte	1 byte	n bytes	2 bytes

- Response

Slave No.	Function code	Received data	Check bytes
1 byte	1 byte	n bytes	2 bytes

- Exception response

Slave No.	Function code + Mask	Exception code	Check bytes
1 byte	1 byte	1 byte	2 bytes

- The response frame contains the function code plus the high-order bit set to 1. For example, if the function code of the query is 0x03, an exception response will return the function 0x83.
- The standardised exception codes are the following:

Exception code	MODBUS Name	Comments
0x01	Illegal Function Code	Function not supported by the product
0x02	Illegal Data Address	Address prohibited
0x03	Illegal Data Value	Incorrect data
0x04	Server Failure	The MODBUS server has generated an error
0x05	Acknowledge	Acknowledgement
0x06	Server Busy	The server is busy
0x07	No acknowledge	No acknowledgement
0x08	Write Error	Write fault
0x09	Overlapped Area	Overlap of zone
0x0A	Gateway problem	Impossible to access the gateway
0x0B	Gateway problem	Exception generated by the gateway

#### 2.4.5 MODBUS/ASCII frames

- In ASCII mode, a frame always starts with the character ":" (3A in hexadecimal) and ends with "carriage return - line feed" (CRLF) (CR = 0x0D and LF= 0x0A).
- The characters which can be transmitted are 0-9, A-F.
- A maximum time between two characters is defined in the system receiving the frame, and if the device which receives this frame sees a longer time, it will consider an error to have occurred. In the ENERIUM 100/200, this time is called the ASCII timeout.

Start of frame ": »	Slave No.	Function code	Data	Check bytes (LRC)	End of frames "CRLF"
1 char	2 chars	2 chars	N chars	2 chars	2 chars

Where 1 char = 7 or 8-bit

- The data of the frame is coded in Big Endian format (high-order bits first). The maximum number of words which can be read (function 3) is 125, and the maximum number of words which can be sent (function 16) is 125.
- The data in a MODBUS / ASCII frame is identical to that in a MODBUS/RTU frame, except each byte is represented by two ASCII bytes created by "converting" as follows:
  - Example: Decimal 165
 

Hexadecimal	0xA5 (Values in MODBUS/RTU)
ASCII	'A' – '5' (the Hex value is considered as two ASCII characters)
Hexadecimal	0x41 – 0x35 (Hex values of the two ASCII characters)

## 2.4.6 Modbus/TCP Frames

- In this mode, the frames are removed from the two CRC bytes (the integrity of data is checked by the TCP/IP layer) and a new header is appended to the start of the frame. This header is called MBAP and contains the following information:

MBAP header	Function code + mask	Exception code
7 bytes	1 byte	1 byte

FIELD	SIZE	DESCRIPTION	CLIENT	SERVER
TRANSACTION IDENTIFIER	2 BYTES	IDENTIFIES THE MODBUS TRANSACTION	INITIALIZED BY THE CLIENT	REPRODUCED BY THE SERVER IN THE RESPONSE FRAME
PROTOCOL IDENTIFIER	2 BYTES	0 = MODBUS PROTOCOL	INITIALIZED BY THE CLIENT	REPRODUCED BY THE SERVER IN THE RESPONSE FRAME
LENGTH	2 BYTES	NUMBER OF BYTES THAT FOLLOW	INITIALIZED BY THE CLIENT IN THE QUERY	INITIALIZED BY THE SERVER IN THE RESPONSE
UNIT IDENTIFIER	1 BYTE	MODBUS ADDRESS FOR A REMOTE SLAVE	INITIALIZED BY THE CLIENT (PUT 0xFF BY DEFAULT)	REPRODUCED BY THE SERVER IN THE RESPONSE FRAME

- Modbus/TCP uses reserved port number 502 and must therefore be freely accessible on the network, but the standard specifies that any Modbus/TCP server must be able to use a second listening port because certain security configurations prohibit port 502.

## 2.5 MODBUS

### 2.5.1 Coding

- All data is transmitted in Big Endian format (high order first). "Floating" quantities are coded in accordance with IEEE standard 754, single precision.

## 2.5.2 Local communication

- Optical communication via the front panel is point-to-point communication.
- The link is established with the ENERDIS optical head.
- The communication parameters are fixed (38,400 bauds, 8, N, 1),
- The mode is also fixed (MODBUS/RTU),
- The slave address is not tested, so all slave numbers from 1 to 255 can be used.

## 2.5.3 Remote Communication

- Depending on the product ordered, remote communication is either by conventional Modbus/RTU on an RS-485 bus or via Modbus/TCP over a TCP/IP network.

## 2.5.4 Supported functions

- Refer to the official documentation for details of the functions supported:
  - **Function 3:** function used to read the MODBUS mapping, for example to recover the measured quantities or curves

→ Request:

Slave No.	3 or 4	First word address	Number of words	CRC
1 byte	1 byte	2 bytes	2 bytes	2 bytes

→ Response:

Slave No.	3 or 4	Number of bytes read	Value of the first word	Value of the last word	CRC
1 byte	1 byte	2 bytes	2 bytes	2 bytes	2 bytes

- **Function 4:** Identical to function 3
- **Function 16:** to send the command words described in this document

→ Request:

Slave No.	16	Address of the first word to force	Number of words to force	Number of bytes to force	Value of words to force	CRC
1 byte	1 byte	2 bytes	2 bytes	1 byte	2 bytes	2 bytes

→ Response:

Slave No.	16	First word address forced	Number of forced words	CRC
1 byte	1 byte	2 bytes	2 bytes	2 bytes

- **Function 8:** function only useful for RS-485 links, used to obtain statistics (counters) on the packets processed and the errors detected. It is possible to read 9 registers:

SUB-FUNCTION	CODE
0x0A	Reset of the counters
0x0B	Frames received without CRC error
0x0C	Frames received with CRC error
0x0D	Number of exception responses
0x0E	Frames sent to the station (without broadcast)
0x0F	Requests for broadcasts received
0x10	NAQ responses
0x11	Slave not ready responses

SUB-FUNCTION	CODE
0x12	Characters not processed
0x13	Number of responses without Function 8

## 3. STATUS WORDS

### 3.1 DIGITAL OUTPUT

#### 3.1.1 Alarm relay status word

- If the digital output is configured in Relay mode, the status word associated with the digital output is an unsigned 16-bit integer. Only the first 8 bits have meaning. Each of these bits indicates the status of the relay associated with the global alarm of the same number. If the relay is active, then bit Rx has the value 1. If the relay is idle, then bit Rx has the value 0.

Example: the global alarm 3 a has been assigned to a relay output. If the global alarm is active, the associated relay R3 will be active, and vice-versa.

Bit 15								Bit 0							
								Status of relay outputs associated with alarms							
R8	R7	R6	R5	R4	R3	R2	R1								

#### 3.1.2 Pulse output status word

- If the digital output is configured in pulse output mode, the status word associated with the digital output is an unsigned 16-bit integer. Only bits 15 and 14 have meaning. If the pulse output of channel 1 is saturated, the corresponding S bit has the value 1; otherwise, it is 0. If channel 1 is in overflow (then there is a loss of pulses), it is the corresponding D bit that is 1; otherwise, it is 0.

Bit 15								Bit 0							
SLOT A				SLOT B				SLOT C				SLOT D			
Channel 1		Channel 2		Channel 1		Channel 2		See 1		Channel 2		Channel 1		Channel 2	
D	S	D	S	D	S	D	S	D	S	D	S	D	S	D	S

#### 3.1.3 Digital output status word (Alarm & Forcing)

- If the digital output is configured to forcing, the status word associated with the digital output is an unsigned 16-bit integer. Only bits 15 and 14 have meaning. These bits indicate the status of the associated relay. If the corresponding S bit has the value 1, the relay is active, if not the S bit is 0 and the relay is inactive.

Bit 15								Bit 0							
SLOT A				SLOT B				SLOT C				SLOT D			
Channel 1		Channel 2		Channel 1		Channel 2		Channel 1		Channel 2		Channel 1		Channel 2	
-	S	-	S	-	S	-	S	-	S	-	S	-	S	-	S

## 3.2 DIGITAL INPUT

- The ENERIUM 100/200/300 has four digital inputs.

Bit 15								Bit 0							
SLOT A				SLOT B				SLOT C				SLOT D			
Channel 1		Channel 2		Channel 1		Channel 2		Channel 1		Channel 2		Channel 1		Channel 2	
-	S	-	S	-	S	-	S	-	S	-	S	-	S	-	S

- Meaning of the status of inputs

- S: status of the input (1: closed, 0: open).

### 3.3 ANALOGUE OUTPUTS

- The ENERIUM 100/200/300 has four analogue outputs (the protocol used is MODBUS/TCP).

Bit 15								Bit 0							
SLOT A				SLOT B				SLOT C				SLOT D			
Channel 1		Channel 2		Channel 1		Channel 2		Channel 1		Channel 2		Channel 1		Channel 2	
HS	LS														

- Meaning of the status of outputs
  - HS: High Saturation, at 1 if the value is higher than the maximum output
  - LS: Low Saturation, at 1 if the value is lower than the minimum output

### 3.4 ANALOGUE INPUTS

- The ENERIUM 100/200/300 has four analogue inputs (the protocol used is MODBUS/TCP).

Bit 15								Bit 0							
SLOT A				SLOT B				SLOT C				SLOT D			
Channel 1		Channel 2		Channel 1		Channel 2		Channel 1		Channel 2		Channel 1		Channel 2	
S	-	S	-	S	-	S	-	S	-	S	-	S	-	S	-

- Meaning of the status of outputs
  - S: Saturation

### 3.5 ALARMS

- The ENERIUM 100/200/300 has 16 elementary alarms, 8 global alarms and storage for global alarms.

Bit 31																Bit 0								Status Global AL							
Store Elementary AL								Status Elementary AL								Status Global AL															
7	6	5	4	3	2	1	0	7	6	5	4	3	2	1	0	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0

- Active/ON = bit set to 1 & Inactive/OFF = bit set to 0.
- "Status Elementary AL" gives the status of each elementary alarm at time T with no storage.
- "Status Global AL" gives the status of each global alarm at time T with no storage.
- "Store Global AL" indicates whether the global alarm has already been activated.
- Only a MODBUS command can reset this status word.
- This status word is saved and restored after line power is restored.

## 4. COMMAND WORDS

### 4.1 FOREWORD

- ❑ The use of a command word not authorized on a version of the product causes a "Data Error" type exception, 0x03.
- ❑ All of the associated parameters must lie within the limits of the specified formats. Any other value causes a "Data Error" type exception, 0x03.
- ❑ In the rest of this chapter, all of the Fxx types are defined in §3 of this same document.

### 4.2 SYSTEM PARAMETERS

- ❑ The MODBUS commands for access to system data all start with the number 0x01XX.

#### 4.2.1 Modification of system date / time

- Command word: 0x0104
- The date is in Unix format: number of seconds since 01/01/1970 coded in an unsigned 32-bit word.
- Associated parameter No. 1:
  - Type F15

### 4.3 RS485 COMMUNICATION PARAMETERS

- ❑ MODBUS commands for access to communication data all start with the number 0x02XX.

#### 4.3.1 Slave number

- Command word: 0x0200
- Associated parameter:
  - Type F9

#### 4.3.2 RS485 data rate

- Command word: 0x0201
- Associated parameter:
  - Type F10

#### 4.3.3 RS485 parity

- Command word: 0x0202
- Associated parameter:
  - Type F11

#### 4.3.4 Number of RS485 stop bits

- Command word: 0x0203
- Associated parameter:
  - Type F12

---

#### 4.3.5 Response time (timeout - used in RTU mode)

---

- Command word: 0x0204
- Associated parameter:
  - Type F13

---

#### 4.3.6 Mode (RTU or ASCII)

---

- Command word: 0x0205
- Associated parameter:
  - Type F64

---

#### 4.3.7 Data bits

---

- Command word: 0x0206
- Associated parameter (unsigned 16-bit integer):
  - 8 in RTU mode
  - 7 or 8 in ASCII mode

---

#### 4.3.8 Timeout (used in ASCII mode)

---

- Command word: 0x0207
- Associated parameter (unsigned 16-bit integer):
  - 1,000 to 10,000 (ms)

---

#### 4.3.9 All RS485 parameters

---

- **Note:** This command word is used to change in a single frame all of the parameters associated with the RS485 communication configuration.
- Command word: 0x0208
- Associated parameter No. 1: slave number
  - Type F9
- Associated parameter No. 2: data rate
  - Type F10
- Associated parameter No. 3: mode
  - Type F64
- Associated parameter No. 4: data bits (unsigned 16-bit integer)
  - 8 in RTU mode
  - 7 or 8 in ASCII mode
- Associated parameter No. 5: parity
  - Type F11
- Associated parameter No. 6: stop bits
  - Type F12
- Associated parameter No. 7: response time (useful in RTU mode)
  - Type F13
- Associated parameter No. 8: timeout (useful in ASCII mode)
  - 1,000 to 10,000 (ms)

## 4.4 ETHERNET COMMUNICATION PARAMETERS

### 4.4.1 Device IP Address

- Command word: 0x0220
- Associated parameter:
  - Type F68
- E.g.: 0xE07D424 corresponds to address 14.7.212.36

### 4.4.2 Gateway IP address

- Command word: 0x0221
- Associated parameter:
  - Type F68

### 4.4.3 Subnet mask

- Command word: 0x0222
- Associated parameter:
  - Type F68

### 4.4.4 All Ethernet parameters

- Command word: 0x0223
- Associated parameter No. 1: device IP Address
  - Type F68
- E.g.: 0xE07D424 corresponds to address 14.7.212.36
- Associated parameter No. 2: subnet mask
  - Type F68
- Associated parameter No. 3: gateway IP Address
  - Type F68

## 4.5 HMI

- The MODBUS commands for access to HMI data all start with the number 0x03XX.

**HMI commands are only available for the ENERIUM 100, 200 and 300.**

### 4.5.1 Language

- Command word: 0x0300
- Associated parameter:
  - Type F2

### 4.5.2 Automatic scrolling

- Command word: 0x0301
- Associated parameter:
  - Type F3

---

#### 4.5.3 Pause time

---

- Command word: 0x0302
- Associated parameter:
  - Type F5

---

#### 4.5.4 List of scrolling screens

---

- Command word: 0x0303
- 16 screens in total, two per 16-bit word. Type F6. With 0xAA, 0xBB, 0xCC etc., as the screen number to display, 0xAA being the first screen displayed and 0xPP the last screen.
- Associated parameter No. 1:
  - 0xAABB
- Associated parameter No. 2:
  - 0xCCDD
- Associated parameter No. 3:
  - 0xEEFF
- Associated parameter No. 4:
  - 0xGGHH
- Associated parameter No. 5:
  - 0xIIJJ
- Associated parameter No. 6:
  - 0xKKLL
- Associated parameter No. 7:
  - 0xMMNN
- Associated parameter No. 8:
  - 0xOOPP

---

#### 4.5.5 Custom screens

---

- Command word: 0x0304
- The associated options are valid for a single screen only, in other words only one screen is configured per frame / command word.
- Associated parameters No. 1:
  - Number of the custom screen to be configured [0..2]
- Associated parameters Nos. 2 to 5:
  - The four Modbus addresses of the four values to be displayed on this screen (parameter 2 corresponds to the highest quantity on the display).
- Associated parameters No. 6 and No. 7:
- Size of values: Type F7
  - 0xAABB
  - 0xCCDD
- Associated parameters No. 8 and No. 9:
- Precision of the values: Type F8
  - 0xAABB
  - 0xCCDD
- Associated parameters Nos. 10 to 21:
  - Title of the screen, one character per byte (24 bytes in total): Type F1
- Associated parameters Nos. 22 to 35:
  - The four labels (length: seven characters per label) one after another, one character

per byte (14 words in total): Type F1

- Associated parameters Nos. 36 to 43:
  - The four units (length: four characters per unit) one after another, one character per byte (8 words in total): Type F1

#### 4.5.6 Changing the password

- Command word: 0x0305
- The password is in four bytes, stored in two words of two bytes.
- Associated parameters No. 1:
  - Types F1 (limited to between '0' (0x30) and 'z' (0x7A)]
- Associated parameters No. 2:
  - Types F1 (limited to between '0' (0x30) and 'z' (0x7A)]

#### 4.5.7 Value of the contrast and backlight of the LCD

- Command word: 0x0306
- Associated parameters No. 1:
  - Types F4 : in the form 0xAABB where AA = contrast and BB backlight (lookup mode)

#### 4.5.8 Display a specific screen

- Command word: 0x0307
- Associated parameters No. 1: Type of screen
  - Types F59
- Associated parameters No. 2: Sub-type
  - Types F60
- The value of the sub-type is only valid outside the main screen. For the main screen, specify sub-type = 0.
- Associated parameters No. 3: Index
  - Types F61

#### 4.5.9 Value of the backlight in standby mode

- Command word: 0x030A
- Associated parameters No. 1:
  - Type F4 (backlight): [0..255]

### 4.6 ALARMS

- The MODBUS commands for setting alarms all start with the number 0x04XX.
- The alarms can be configured only if an output is materially present and only if it is configured in Relay mode.

#### 4.6.1 Configuration of an elementary alarm

- There are 16 elementary alarms to configure. This command is used to completely configure ONE elementary alarm.

- Command word: 0x0400
- Associated parameter No. 1: Number of the elementary alarm
  - Type F20
- Associated parameter No. 2: Quantity to be monitored
  - Type F17
- Associated parameter No. 3: Threshold type
  - Type F18
- Associated parameter Nos. 4 and 5: Threshold value
  - Int32
- Associated parameter No. 6: Timeout
  - Type F19
- Remark: For it to be possible to configure the elementary alarms for the Enerium 100/200/300, the digital output must first be configured in Relay mode (otherwise the command word will not function).

#### 4.6.2 Configuration of a global alarm

- There are eight global alarms. This command is used to completely configure ONE global alarm.
- Command word: 0x0401
- Associated parameter No. 1: Global alarm No.
  - Type F21
- Associated parameter Nos. 2 and 3: Associated equation
  - Type F22
- 0x00CCBBAA
- "AA": Type F20
- "BB": Type F20
- "CC": 0= "AND" – 1 = "OR"

#### 4.6.3 Reset of the alarms

- Command word: 0x0402
- This command performs:
  - A reset of the alarm status word.
  - A reset of the timeouts of the elementary alarms.
  - A reset of the record of events and of the information in preparation (e.g. duration, start date, etc.).
  - A reset of the events counter.
  - Erasure of the alarms configuration.

#### 4.6.4 Reset of the alarms buffer

- Command word: 0x0403
- This command performs:
  - A reset of the buffer, without resetting the information in preparation (e.g.: duration, start date, etc.).
  - A reset of the events counter.

#### 4.6.5 Reset of the alarm status word

- Command word: 0x0404
- This command performs:
  - A reset of the alarm status word.

#### 4.6.6 Global alarm labelling

- This command enables a label to be assigned to a global alarm.
- Command word: 0x0405
- Associated parameter No. 1: Global alarm No.
  - Type F21
- Associated parameter Nos. 2 to 17: Label
  - Type F1

#### 4.6.7 Reset of the timeouts of elementary alarms

- Command word: 0x0406
- This command performs:
  - A reset of the timeouts of all elementary alarms, including active timeouts.

#### 4.6.8 Setting of parameters for blinking of backlight

- Command word: 0x0407
- Associated parameter No. 1:
  - Type F73

#### 4.6.9 Alarms FIFO

- The alarms FIFO is a circular buffer. It is 64 records in size (duration, starting date, etc.); when the 64th record is reached, index 0 is overwritten by the 65th record.
- The events counter indicates the number of events that have occurred since the last reset. This counter runs from 0 to 65472.

### 4.7 DIGITAL OUTPUTS

- The MODBUS commands for setting digital outputs all start with the number 0x05XX.

#### 4.7.1 Configuration of a digital output board

- This command word enables the output of a board to be configured.
  - Command word: 0x0500
- Associated parameter No. 1: Selection of the slot
  - Type F23
- If the chosen slot is not a digital output, the product returns a "Data Error" type exception, 0x3.
- Associated parameter No. 2: Selection of the output
  - Type F24
- Associated parameter No. 3: Mode of the output

- Type F38
- Associated parameter No. 4: Weight of the output pulse
  - Type F26

**! the parameter is in a signed quantity for future development with a weight of type 0.1 or 0.01**

- Associated parameter No. 5: Level of activation of the output
  - Type F27
- **Note:** the level of activation is only valid in the Alarm Relay mode. In other modes (Pulse and Forced), the outputs are always considered to be NO.
- Associated parameter No. 6: (Quantity associated with the output).
  - Quantity number: Type F21 in Relay mode or Type F28 in Pulse mode

#### 4.7.2 Minimum width of pulses

- Command word: 0x0501
- Associated parameter No. 1: Pulse width
  - Type F29
- The minimum width of pulses is a parameter common to all digital outputs of the product.

#### 4.7.3 Forced control of a digital output

- Command word: 0x0502
- Associated parameter No. 1: Selection of the slot
  - Type F23
- Associated parameter No. 2: Selection of the output
  - Type F24
- Associated parameter No. 3: Status of the forced pin
  - Type F30
- **Note:** Control in Forced mode does not change the configuration of the corresponding board. After 10 minutes, the mode returns to normal mode, except for the PLC output mode.

#### 4.7.4 Reset of the pulse outputs

- Command word: 0x0503
- This command resets all the generation indexes of the pulse outputs, as well as the overshoots index for a given board.
- Associated parameter No. 1: Selection of the slot
  - Type F23
- Associated parameter No. 2: Selection of the output
  - Type F24

### 4.8 METROLOGY

- The MODBUS commands for setting Metrology parameters all start with the number 0x06XX.
- ! Primary PT x Primary CT limited to 693 Megavolts.**

#### 4.8.1 Primary PT

- Command word: 0x0601

- Associated parameter No. 1:
  - Value of the primary PT (unsigned 32-bit integer), comprised between 100 and 650,000 (in steps of 1).

#### 4.8.2 Secondary PT

- Command word: 0x0602
- Associated parameter No. 1:
  - Value of the secondary PT (unsigned 32-bit integer), comprised between 100 and 480 (in steps of 1).

#### 4.8.3 Primary CT

- Command word: 0x0603
- Associated parameter No. 1:
  - Value of the primary CT (unsigned 32-bit integer), comprised between 100 and 25,000 (in steps of 1).

#### 4.8.4 Secondary CT

- Command word: 0x0604
- Associated parameter No. 1:
  - Value of the secondary CT (unsigned 32-bit integer), comprised between 1 and 5 (in steps of 1).

#### 4.8.5 Line frequency (50-60Hz products only)

- Command word: 0x0605
- Associated parameter No. 1:
  - Type F34

#### 4.8.6 Period of integration of the average

- Command word: 0x0606
- Associated parameter No. 1: In seconds
  - Type F33

#### 4.8.7 Initialisation of the Energies Index

- Command word for initialisation of active energy in receiver mode: 0x0610
- Command word for initialisation of active energy in generator mode: 0x0611
- Command word for initialisation of reactive energy in quadrant 1: 0x0612
- Command word for initialisation of reactive energy in quadrant 2: 0x0613
- Command word for initialisation of reactive energy in quadrant 3: 0x0614
- Command word for initialisation of reactive energy in quadrant 4: 0x0615
- Command word for initialisation of apparent energy in receiver mode: 0x0616
- Command word for initialisation of apparent energy in generator mode: 0x0617
- Associated parameter No. 1:
  - Initialisation value (MWh/Mvarh/MVAh) (unsigned 32-bit integer)
    - Min = 0 / Max = 999,999,999
- Associated parameter No. 2:
  - Initialisation value (kWh/kvarh/kVAh) (unsigned 32-bit integer)

- 
- Min = 0 / Max = 999,999

#### **4.8.8 Reset of the minima**

---

- Command word: 0x0620

#### **4.8.9 Reset of the maxima**

---

- Command word: 0x0621

#### **4.8.10 Reset of the averages**

---

- Command word: 0x0622

#### **4.8.11 Reset of the energies**

---

- Command word: 0x0623

#### **4.8.12 Reset of all time counters**

---

- Command word: 0x0624

#### **4.8.13 Reset of the operating time counter**

---

- Command word: 0x0625

#### **4.8.14 Reset of the voltage-present time counter**

---

- Command word: 0x0626

#### **4.8.15 Reset of the current-present time counter**

---

- Command word: 0x0627

#### **4.8.16 Initialisation of the operating time counter**

---

- Command word: 0x0628
- Associated parameter No. 1:
  - Value in unsigned 32-bit integer from 0 to 2,000,000,000 inclusive

#### **4.8.17 Initialisation of the voltage-present time counter**

---

- Command word: 0x0629
- Associated parameter No. 1:
  - Value in unsigned 32-bit integer from 0 to 2,000,000,000 inclusive

#### **4.8.18 Initialisation of the current-present time counter**

---

- Command word: 0x062A
- Associated parameter No. 1:
  - Value in unsigned 32-bit integer from 0 to 2,000,000,000 inclusive

---

#### 4.8.19 Choice of type of wiring 3 or 4-wire

---

- Command word: 0x062B
- Associated parameter No. 1:
  - Type F74

---

#### 4.8.20 Primary CT IN

---

- Command word: 0x062D
- Associated parameter No. 1:
  - Value of the primary CT IN (unsigned 32-bit integer)
- The value of the primary CT IN must be comprised between 100 and 25,000 (in steps of 1)

---

#### 4.8.21 Secondary CT IN

---

- Command word: 0x062E
- Associated parameter No. 1:
  - Value of the secondary CT IN (unsigned 32-bit integer)
- The value of the primary CT IN must be comprised between 1 and 5 (in steps of 1)

---

#### 4.8.22 Calculation of neutral current

---

- Command word: 0x0631
- Associated parameter No. 1: Boolean
  - F3
- **Note:** If the neutral current is not calculated, then it is measured.

---

#### 4.8.23 Declared voltage Uc (300 and 310 only)

---

- Command word: 0x0632
- Associated parameter No. 1:
  - Voltage Uc (unsigned 32-bit integer)
- Note: This voltage is used for the EN50160 and dips / outages statistics.

---

### 4.9 RECORDING CURVES

---

□ The MODBUS commands for setting the parameters for recordings all start with the value 0x07XX

---

#### 4.9.1 Configuration of recording curves

---

- Command word: 0x0700
- Associated parameter No. 1: Curve number
  - Type F47
- Associated parameter No. 2: Sync type
  - Type F48
- Associated parameter No. 3: Samples interval
  - Type F50
- Associated parameter No. 4: Start date of recording, modes 0 and 1 only
  - Type F15

- Associated parameter No. 5: Mode
  - Type F51
- Associated parameter No. 6: Number of quantities to be recorded at each point
  - 1 (uint16) if ENERIUM 100, 110, 200, 210, 300 and 310
- Associated parameter No. 7: Quantity 1
  - Type F52

#### 4.9.2 Reading of a recording curve

- Command word: 0x0701
- Associated parameter No. 1: Curve number
  - Type F47
- Associated parameter No. 2: Block number
  - Type F49

#### 4.9.3 Stopping a recording curve

- Command word: 0x0702
- Associated parameter No. 1:
  - Type F47
- This command word is used to stop a recording curve while retaining the possibility of reading its content. It is particularly useful in the "Start-up without Stop" mode.

#### 4.9.4 Erasing a recording curve

- Command word: 0x0703
- Associated parameter No. 1:
  - Type F47
- This command word is used to erase all the recorded points of a recording curve. The commands stops the curve first.

### 4.10 LOAD CURVES

- The MODBUS commands for setting the parameters for recordings all start with the value of 0x07XX.
- The command words are only active in the ENERIUM 200/300 versions. For ENERIUM 100, the Modbus error MODBUS\_ILLEGAL\_DATA is sent back.

#### 4.10.1 Configuration of Load Curve

- Command word: 0x0704
- Associated parameter No. 1: (Samples interval)
  - Type F55
- Associated parameter No. 2: (Quantities recorded)
  - Type F56

#### 4.10.2 Reading of Load Curve

- Command word: 0x0705
- Associated parameter No. 1: Identification number of existing configuration in the FifoldCC FIFO
  - Unsigned 16-bit integer
- Associated parameter No. 2:
  - Always 0x0000
- Associated parameter No. 3: Reading start date
  - Type F15

#### 4.10.3 Erasing a Load Curve

- Command word: 0x0706
- Associated parameter No. 1: Confirmation of erasure
  - Type F3
- The erasure of the Load Curve leads to the load curve FIFO to be reset.

#### 4.10.4 Load curve - Digital outputx Unit

- Command word: 0x0708
- Associated parameter No. 1: Selection of SLOT
  - Type F23
- Associated parameter No. 2: Selection of channel
  - Type F24
- Associated parameter Nos. 3 to 6: Unit
  - Type F1

### 4.11 DIGITAL INPUTS

- The MODBUS commands for setting digital inputs all start with the number 0x08XX.

#### 4.11.1 Setting a digital input

- This command word enables the input of a board to be configured.
  - Command word: 0x0800
- Associated parameter No. 1: Selection of the slot associated with this configuration
  - Type F23
- If the chosen slot is not a digital input, the product returns an exception of the type "Data Error" 0x3.
- Associated parameter No. 2: Choice of input
  - Type F24
- Associated parameter No. 3: Mode of input
  - Type F25
- Associated parameter No. 4 (MSB) and No. 5 (LSB): Weight of output pulse 1
  - Pulse weight [0.0001..999.9999] in steps of 0.0001. The value is expressed in 1/10,000 (e.g.: 4,620,666 is equivalent to a weight of 462.0666)

---

#### 4.11.2 Setting of the external synchronisation of the clock

---

- This command word enables one and only one digital input to be assigned as a sync input.
  - Command word: 0x0801
- Associated parameter No. 1: Selection of the slot associated with this configuration
  - Type F23
- Associated parameter No. 2: Input used for synchronisation
  - Type F24
- **Note:** this configuration is independent from the configuration of digital input boards. The user must therefore check that the configurations are consistent to obtain the desired behaviour.

---

#### 4.11.3 Resetting the pulse counter (digital input energy index)

---

- This command word enables the pulse counter of a specified input and board to be reset
- Command word: 0x0802
- Associated parameter No. 1: Selection of the slot associated with this configuration
  - Type F23
- If the chosen slot is not a digital input, the product returns an exception of the type "Data Error" 0x3.
- Associated parameter No. 2: Choice of input
  - Type F24

---

#### 4.11.4 Reset of the synchronisation status word

---

- This command word enables the status word indicating that there has been a loss of synchronisation with the external Time Signal to be reset.
- Command word: 0x0803

---

#### 4.11.5 Setting an input label

---

- This command word enables the label of a digital input to be modified.
- Command word: 0x0804
- Associated parameter No. 1: Selection of the slot associated with this configuration
  - Type F23
- Associated parameter No. 2: Choice of input
  - Type F24
- Associated parameter Nos. 3 to 18: Input label, ASCII characters
  - Type F1 (32 bytes in total)

---

#### 4.11.6 Setting the unit of an input

---

- This command word enables the unit of a digital input to be modified.
- Command word: 0x0805
- Associated parameter No. 1: Selection of the slot associated with this configuration
  - Type F23
- Associated parameter No. 2: Choice of input
  - Type F24
- Associated parameter Nos. 3 to 6: Input label, ASCII characters

- Type F1 (8 bytes in total)

#### 4.11.7 Initialisation of an energy index with a specific value

- This command word enables an energy index to be initialised at a specific value.
- Command word: 0x0806
- Associated parameter No. 1: Selection of the slot associated with this configuration
  - Type F23
- Associated parameter No. 2: Choice of input
  - Type F24
- Associated parameter Nos. 3 and 4: MSB value of the 64-bit energy index
  - 0 <= MSB <= 9,999,999
- Associated parameter Nos. 5 and 6: LSB value of the 64-bit energy index
  - 0 <= MSB <= 9,999,999

### 4.12 ANALOGUE OUTPUTS

- The MODBUS commands for setting Analogue outputs all start with the number 0x09XX.

#### 4.12.1 Setting an Analogue output board

- Command word: 0x0900
- Associated parameter No. 1: Selection of slot
  - Type F23
- Associated parameter No. 2: Selection of channel
  - Type F24
- Associated parameter No. 3: Quantity associated with the output
  - Type F43
- Associated parameter No. 4: Type of quantity
  - Type F44
- Associated parameter No. 5: Emin
  - Minimum value of the quantity (int32). In the case of the Cos or PF, there are 2 16-bit words, PF for the value and pf for the type (F39).
- Associated parameter No. 6: Emax
  - Maximum value of the quantity (int32). Ditto.
- Emax must always be greater than Emin.
- Associated parameter No. 7: Smin
  - Minimum value of the analogue output as a 16-bit integer, expressed in µA. This value must not be less than -22,000.
- Associated parameter No. 8: Smax
  - Maximum value of the analogue output as a 16-bit integer, expressed in µA. This value must not be greater than 22,000.

#### 4.12.2 Setting an Analogue output board

- Command word: 0x0910
- Associated parameter No. 1: Selection of slot
  - Type F23

- Associated parameter No. 2: Selection of channel
  - Type F24
- Associated parameter No. 3: Quantity associated with the output
  - Type F43
- Associated parameter No. 4: Type of quantity
  - Type F44
- Associated parameter No. 5: Transfer function
  - Type F62
- Associated parameter No. 6: Emin
  - Minimum value of the quantity (int32). In the case of the Cos or PF, there are 2 16-bit words, PF for the value and pf for the type (F39).
- Associated parameter No. 7: Ecass
  - Break value of the quantity (int32). Ditto.
- Associated parameter No. 8: Emax
  - Maximum value of the quantity (int32). Ditto.
- Emax must always be greater than Emin
- Associated parameter No. 9: Smin
  - Minimum value of the analogue output as a 16-bit integer, expressed in  $\mu\text{A}$ . This value must not be greater than - 20,000.
- Associated parameter No. 10: Scass
  - Break value of the analogue output as a 16-bit integer, expressed in  $\mu\text{A}$ . This value must not be greater than 20,000.
- Associated parameter No. 11: Smax
  - Break value of the analogue output as a 16-bit integer, expressed in  $\mu\text{A}$ . This value must not be greater than 20,000.

**/!\ In the event of a simple slope the following is required:  $S_{max} - S_{min} \geq 4\text{mA}$**

**/!\ In the event of a double slope the following is required:  $S_{max} - S_{min} \geq 4\text{mA}$**   
 $S_{cas} - S_{min} \geq 2\text{mA}$   
 $S_{max} - S_{cas} \geq 2\text{mA}$

**/!\ In the event of a quadratic slope the following is required:  $S_{max} - S_{min} \geq 4\text{mA}$**

#### **4.12.3 Test Mode for an Analogue output board**

- Command word: 0x0901
- Associated parameter No. 1: Selection of slot
  - Type F23
- Associated parameter No. 2: Selection of channel
  - Type F24
- Associated parameter No. 3: Forcing or no forcing (no = return to normal mode)
  - Type F30
- Associated parameters No. 4:
  - Value of the current to force, expressed in  $\mu\text{A}$  (signed 16-bit integer)
- **Note:** Management in forced mode does not change the configuration of the corresponding board. After 10 minutes, the mode returns to normal mode.

#### **4.12.4 Management of overshoots for the analogue output**

- Command word: 0x0904

- Associated parameter No. 1: Analogue output overshoot
  - Type F35 This command word has no influence on the product configuration. It just enables the PC software to know if the thresholds take into account an overshoot of 10% or not

## 4.13 CONFIGURATION OF THE METROLOGY LED

- The MODBUS commands for configuration of the metrology LED all start with the number 0x0AXX.

### 4.13.1 Assignment of a quantity to the metrology LED

- Command word: 0x0A00
- Associated parameter: Assigned quantity
  - Type F46

## 4.14 CONFIGURATION OF DIPS / OUTAGES / OVERVOLTAGE / OVERCURRENT (FOR ENERIUM 300 ONLY)

- The MODBUS commands for configuration of the dips / overvoltage / overcurrent all start with the number 0x0AXX.

### 4.14.1 Activation of dips, outages, overvoltage / overcurrent

/!\ The quantities monitored are 3V and 3I in four-wire mode  
 /!\ The quantities monitored are 3U and 3I in three-wire mode

- Command word: 0x0660
- Associated parameter No. 1: Dips, outages activation
  - Type F63

### 4.14.2 Modification of voltage thresholds

- Command word: 0x0661
- Associated parameter No. 1:
  - Hysteresis (16-bit unsigned integer)
- The value of the hysteresis must be comprised between 1 and 5. Unit: %
- Associated parameter No. 2:
  - Outage threshold (16-bit unsigned integer)
- The value of the outage threshold must be comprised between 0 and 10. Unit %

/!\ The value corresponds to a percentage of Voltage Uc for Us in three-wire mode  
 /!\ The value corresponds to a percentage of Voltage Uc x √3 for Us in four-wire mode

/!\ The value corresponds to a percentage of Voltage Uc for Vs in three-wire mode  
 $\sqrt{3}$

/!\ The value corresponds to a percentage of Voltage Uc for Vs in four-wire mode

- Associated parameter No. 3:
  - Dips threshold (unsigned 16-bit integer)
- The value of the dips threshold must be between 0 and 95. Unit %

/!\ The value corresponds to a percentage of Voltage Uc for Us in three-wire mode  
 /!\ The value corresponds to a percentage of Voltage Uc x √3 for Us in four-wire mode

/!\ The value corresponds to a percentage of Voltage Uc for Vs in three-wire mode

$\sqrt{3}$

/!\ The value corresponds to a percentage of Voltage Uc for Vs in four-wire mode

- Associated parameter No. 4:

- Overtoltage threshold (unsigned 16-bit integer)

- The value of the dips threshold must be between 105 and 120. Unit %

/!\ The value corresponds to a percentage of Voltage Uc for Us in three-wire mode

/!\ The value corresponds to a percentage of Voltage Uc x  $\sqrt{3}$  for Us in four-wire mode

/!\ The value corresponds to a percentage of Voltage Uc for Vs in three-wire mode

$\sqrt{3}$

/!\ The value corresponds to a percentage of Voltage Uc for Vs in four-wire mode

#### 4.14.3 Modification of current thresholds

- Command word: 0x0662
- Associated parameter No. 1:
  - Hysteresis (16-bit unsigned integer)
- The value of the hysteresis must be comprised between 1 and 5. Unit: %
- Associated parameter No. 2:
  - Overcurrent threshold (unsigned 16-bit integer)
- The value of the hysteresis must be between 105 and 120. Unit: %

/!\ The value corresponds to a percentage of the primary CT

#### 4.14.4 Modification of time thresholds

- Command word: 0x0663
- Associated parameter No. 1:
  - Delay between very short outage and short outage (unsigned 16-bit integer)
- The value must be comprised between 200 and 1,000. Unit: ms
- Associated parameter No. 2:
  - Delay between short outage and long outage (unsigned 32-bit integer)
- The value must be comprised between 60,000 and 300,000. Unit: ms

#### 4.14.5 Modification of outages transitions

- Command word: 0x0664
- Associated parameter:
  - Number of half periods covered by the transition for one outage (unsigned 16-bit integer)
- The value must be comprised between 0 and 5.

#### 4.14.6 Reset of dips, outages, overvoltage / overcurrent

- Command word: 0x0665

## 4.15 EN50160 STATISTICS TABLE (ENERIUM 300 ONLY)

- The MODBUS commands for the EN50160 statistics table all start with the number 0x067X.

### 4.15.1 Modification of frequency thresholds

- Command word: 0x0670
- Associated parameter No. 1:
  - Threshold 1, high (signed 16-bit integer)
- The value must be comprised between 10 and 30, in steps of 10. Unit: 1/10%
- Associated parameter No. 2:
  - Threshold 1, low (signed 16-bit integer)
- The value must be comprised between -10 and -30, in steps of 10. Unit: 1/10%
- Associated parameter No. 3:
  - Threshold, compliance (16-bit unsigned integer)
- The value must be comprised between 0 and 1,000, in steps of 1. Unit: 1/10%
- Associated parameter No. 4:
  - Threshold 2, high (signed 16-bit integer)
- The value must be comprised between 40 and 150, in steps of 10. Unit: 1/10%
- Associated parameter No. 5:
  - Threshold 2, low (signed 16-bit integer)
- The value must be comprised between -40 and -150, in steps of 10. Unit: 1/10%
- Associated parameter No. 6:
  - Threshold 2, compliance (16-bit unsigned integer)
- The value must be comprised between 0 and 1,000, in steps of 1. Unit: 1/10%

### 4.15.2 Modification of voltage thresholds

- Command word: 0x0671
- Associated parameter No. 1:
  - Threshold 1, high (signed 16-bit integer)
- The value must be comprised between 50 and 100, in steps of 10. Unit: 1/10%
- Associated parameter No. 2:
  - Threshold 1, low (signed 16-bit integer)
- The value must be comprised between -50 and -100, in steps of 10. Unit: 1/10%
- Associated parameter No. 3:
  - Threshold 2, compliance (16-bit unsigned integer)
- The value must be comprised between 0 and 1,000, in steps of 1. Unit: 1/10%
- Associated parameter No. 4:
  - Threshold 2, high (signed 16-bit integer)
- The value must be comprised between 100 and 200, in steps of 10. Unit: 1/10%
- Associated parameter No. 5:
  - Threshold 2, low (signed 16-bit integer)
- The value must be comprised between -100 and -200, in steps of 10. Unit: 1/10%
- Associated parameter No. 6:
  - Threshold 2, compliance (16-bit unsigned integer)
- The value must be comprised between 0 and 1,000, in steps of 1. Unit: 1/10%

#### 4.15.3 Modification of U unbalance threshold

- Command word: 0x0672
- Associated parameter No. 1:
  - Threshold (16-bit unsigned integer)
- The value must be comprised between 10 and 50, in steps of 5. Unit: 1/10%
- Associated parameter No. 2:
  - Compliance threshold (16-bit unsigned integer)
- The value must be comprised between 0 and 1,000, in steps of 1. Unit: 1/10%

#### 4.15.4 Modification of THD threshold

- Command word: 0x0673
- Associated parameter:
  - Threshold (16-bit unsigned integer)
- The value must be comprised between 10 and 150, in steps of 10. Unit: 1/10%
- Associated parameter No. 2:
  - Compliance threshold (16-bit unsigned integer)
- The value must be comprised between 0 and 1,000, in steps of 1. Unit: 1/10%

#### 4.15.5 Modification of harmonics thresholds voltage

- Command word: 0x0674
- Associated parameter No. 1:
  - Threshold, rank 2 (16-bit unsigned integer)
- The value must be comprised between 5 and 150, in steps of 5. Unit: 1/10%
- Associated parameter No. 2:
  - Compliance threshold, rank 2 (16-bit unsigned integer)
- The value must be comprised between 0 and 1,000, in steps of 1. Unit: 1/10%
- Associated parameter No. 3:
  - Threshold, rank 3 (16-bit unsigned integer)
- The value must be comprised between 5 and 150, in steps of 5. Unit: 1/10%
- Associated parameter No. 4:
  - Compliance threshold, rank 3 (16-bit unsigned integer)
- The value must be comprised between 0 and 1,000, in steps of 1. Unit: 1/10%
- Associated parameter No. 5:
  - Threshold, rank 4 (16-bit unsigned integer)
- The value must be comprised between 5 and 150, in steps of 5. Unit: 1/10%
- Associated parameter No. 6:
  - Compliance threshold, rank 4 (16-bit unsigned integer)
- The value must be comprised between 0 and 1,000, in steps of 1. Unit: 1/10%
- Associated parameter No. 7:
  - Threshold, rank 5 (16-bit unsigned integer)
- The value must be comprised between 5 and 150, in steps of 5. Unit: 1/10%
- Associated parameter No. 8:
  - Compliance threshold, rank 5 (16-bit unsigned integer)
- The value must be comprised between 0 and 1,000, in steps of 1. Unit: 1/10%
- Associated parameter No. 9:

- Threshold, rank 6 (16-bit unsigned integer)
- The value must be comprised between 5 and 150, in steps of 5. Unit: 1/10%
- Associated parameter No. 10:
  - Compliance threshold, rank 6 (16-bit unsigned integer)
- The value must be comprised between 0 and 1,000, in steps of 1. Unit: 1/10%
- Associated parameter No. 11:
  - Threshold, rank 7 (16-bit unsigned integer)
- The value must be comprised between 5 and 150, in steps of 5. Unit: 1/10%
- Associated parameter No. 12:
  - Compliance threshold, rank 7 (16-bit unsigned integer)
- The value must be comprised between 0 and 1,000, in steps of 1. Unit: 1/10%
- Associated parameter No. 13:
  - Threshold, rank 8 (16-bit unsigned integer)
- The value must be comprised between 5 and 150, in steps of 5. Unit: 1/10%
- Associated parameter No. 14:
  - Compliance threshold, rank 8 (16-bit unsigned integer)
- The value must be comprised between 0 and 1,000, in steps of 1. Unit: 1/10%
- Associated parameter No. 15:
  - Threshold, rank 9 (16-bit unsigned integer)
- The value must be comprised between 5 and 150, in steps of 5. Unit: 1/10%
- Associated parameter No. 16:
  - Compliance threshold, rank 9 (16-bit unsigned integer)
- The value must be comprised between 0 and 1,000, in steps of 1. Unit: 1/10%
- Associated parameter No. 17:
  - Threshold, rank 10 (16-bit unsigned integer)
- The value must be comprised between 5 and 150, in steps of 5. Unit: 1/10%
- Associated parameter No. 18:
  - Compliance threshold, rank 10 (16-bit unsigned integer)
- The value must be comprised between 0 and 1,000, in steps of 1. Unit: 1/10%
- Associated parameter No. 19:
  - Threshold, rank 11 (16-bit unsigned integer)
- The value must be comprised between 5 and 150, in steps of 5. Unit: 1/10%
- Associated parameter No. 20:
  - Compliance threshold, rank 11 (16-bit unsigned integer)
- The value must be comprised between 0 and 1,000, in steps of 1. Unit: 1/10%
- Associated parameter No. 21:
  - Threshold, rank 12 (16-bit unsigned integer)
- The value must be comprised between 5 and 150, in steps of 5. Unit: 1/10%
- Associated parameter No. 22:
  - Compliance threshold, rank 12 (16-bit unsigned integer)
- The value must be comprised between 0 and 1,000, in steps of 1. Unit: 1/10%
- Associated parameter No. 23:
  - Threshold, rank 13 (16-bit unsigned integer)
- The value must be comprised between 5 and 150, in steps of 5. Unit: 1/10%
- Associated parameter No. 24:
  - Compliance threshold, rank 13 (16-bit unsigned integer)

- The value must be comprised between 0 and 1,000, in steps of 1. Unit: 1/10%
- Associated parameter No. 25:
  - Threshold, rank 14 (16-bit unsigned integer)
- The value must be comprised between 5 and 150, in steps of 5. Unit: 1/10%
- Associated parameter No. 26:
  - Compliance threshold, rank 14 (16-bit unsigned integer)
- The value must be comprised between 0 and 1,000, in steps of 1. Unit: 1/10%
- Associated parameter No. 27:
  - Threshold, rank 15 (16-bit unsigned integer)
- The value must be comprised between 5 and 150, in steps of 5. Unit: 1/10%
- Associated parameter No. 28:
  - Compliance threshold, rank 15 (16-bit unsigned integer)
- The value must be comprised between 0 and 1,000, in steps of 1. Unit: 1/10%
- Associated parameter No. 29:
  - Threshold, rank 16 (16-bit unsigned integer)
- The value must be comprised between 5 and 150, in steps of 5. Unit: 1/10%
- Associated parameter No. 30:
  - Compliance threshold, rank 16 (16-bit unsigned integer)
- The value must be comprised between 0 and 1,000, in steps of 1. Unit: 1/10%
- Associated parameter No. 31:
  - Threshold, rank 17 (16-bit unsigned integer)
- The value must be comprised between 5 and 150, in steps of 5. Unit: 1/10%
- Associated parameter No. 32:
  - Compliance threshold, rank 17 (16-bit unsigned integer)
- The value must be comprised between 0 and 1,000, in steps of 1. Unit: 1/10%
- Associated parameter No. 33:
  - Threshold, rank 18 (16-bit unsigned integer)
- The value must be comprised between 5 and 150, in steps of 5. Unit: 1/10%
- Associated parameter No. 34:
  - Compliance threshold, rank 18 (16-bit unsigned integer)
- The value must be comprised between 0 and 1,000, in steps of 1. Unit: 1/10%
- Associated parameter No. 35:
  - Threshold, rank 19 (16-bit unsigned integer)
- The value must be comprised between 5 and 150, in steps of 5. Unit: 1/10%
- Associated parameter No. 36:
  - Compliance threshold, rank 19 (16-bit unsigned integer)
- The value must be comprised between 0 and 1,000, in steps of 1. Unit: 1/10%
- Associated parameter No. 37:
  - Threshold, rank 20 (16-bit unsigned integer)
- The value must be comprised between 5 and 150, in steps of 5. Unit: 1/10%
- Associated parameter No. 38:
  - Compliance threshold, rank 20 (16-bit unsigned integer)
- The value must be comprised between 0 and 1,000, in steps of 1. Unit: 1/10%
- Associated parameter No. 39:
  - Threshold, rank 21 (16-bit unsigned integer)
- The value must be comprised between 5 and 150, in steps of 5. Unit: 1/10%

- Associated parameter No. 40:
  - Compliance threshold, rank 21 (16-bit unsigned integer)
- The value must be comprised between 0 and 1,000, in steps of 1. Unit: 1/10%
- Associated parameter No. 41:
  - Threshold, rank 22 (16-bit unsigned integer)
- The value must be comprised between 5 and 150, in steps of 5. Unit: 1/10%
- Associated parameter No. 42:
  - Compliance threshold, rank 22 (16-bit unsigned integer)
- The value must be comprised between 0 and 1,000, in steps of 1. Unit: 1/10%
- Associated parameter No. 43:
  - Threshold, rank 23 (16-bit unsigned integer)
- The value must be comprised between 5 and 150, in steps of 5. Unit: 1/10%
- Associated parameter No. 44:
  - Compliance threshold, rank 23 (16-bit unsigned integer)
- The value must be comprised between 0 and 1,000, in steps of 1. Unit: 1/10%
- Associated parameter No. 45:
  - Threshold, rank 24 (16-bit unsigned integer)
- The value must be comprised between 5 and 150, in steps of 5. Unit: 1/10%
- Associated parameter No. 46:
  - Compliance threshold, rank 24 (16-bit unsigned integer)
- The value must be comprised between 0 and 1,000, in steps of 1. Unit: 1/10%
- Associated parameter No. 47:
  - Threshold, rank 25 (16-bit unsigned integer)
- The value must be comprised between 5 and 150, in steps of 5. Unit: 1/10%
- Associated parameter No. 48:
  - Compliance threshold, rank 25 (16-bit unsigned integer)
- The value must be comprised between 0 and 1,000, in steps of 1. Unit: 1/10%

#### 4.15.6 Reset of EN50160 statistics

- Command word: 0x0675

### 4.16 CONFIGURATION OF AN ANALOGUE INPUT

- The MODBUS commands for the configuration of an analogue input all start with the number 0x0BXX.

#### 4.16.1 Setting of an analogue input board

- Command word: 0x0B01
- Associated parameter No. 1: Selection of SLOT
  - Type F23
- Associated parameter No. 2: Selection of channel
  - Type F24

- Associated parameter No. 3: Emin
  - Minimum value of the input as an unsigned 16-bit integer, expressed in µA. This value must not be less than 22,000.
- Associated parameter No. 4: Emax
  - Maximum value of the input as an unsigned 16-bit integer, expressed in µA. This value must not be less than 22,000 and greater than Emin.
- Associated parameter Nos. 5 and 6: Min. value
  - Minimum value associated with Emin as a signed 32-bit integer.
- Associated parameter Nos. 7 and 8: Max. value
  - Maximum value associated with Emax as a signed 32-bit integer. Max. value must be greater than Min. value.

#### 4.16.2 Setting of the label of an analogue input board

- Command word: 0x0B02
- Associated parameter No. 1: Selection of SLOT
  - Type F23
- Associated parameter No. 2: Selection of channel
  - Type F24
- Associated parameter Nos. 3 to 18: Label
  - Type F1 (32 bytes in total)

#### 4.16.3 Setting of the unit of an analogue input board

- Command word: 0x0B03
- Associated parameter No. 1: Selection of SLOT
  - Type F23
- Associated parameter No. 2: Selection of channel
  - Type F24
- Associated parameter Nos. 3 to 6: Unit
  - Type F1 (8 bytes in total)

### 4.17 CONFIGURATION OF WAVEFORMS (ENERIUM 300 ONLY)

- The MODBUS commands for configuration of the waveforms all start with the number 0x068X.

#### 4.17.1 Setting of waveforms

- Command word: 0x0680
- Associated parameters Nos. 1 to 4: waveforms quantities
  - Type F75
- Associated parameter No. 5: Activation, Command Word Event
  - Type F63
- Associated parameter No. 6: Activation, Sync Input Event
  - Type F63
- Associated parameter No. 7: Activation, Overvoltage Event
  - Type F63.

- Associated parameter No. 8: Activation, Overcurrent Event
  - Type F63.
- Associated parameter No. 9: Activation, Dips Event
  - Type F63.
- Associated parameter No. 10: Activation, Very Short Outage
  - Type F63.
- Associated parameter No. 11: Activation, Short Outage
  - Type F63.
- Associated parameter No. 12: Activation, Long Outage
  - Type F63.
- Associated parameter No. 13: Activation, Very Short Outage Event preceded by a dip
  - Type F63.
- Associated parameter No. 14: Activation, Very Short Outage Event preceded by a dip
  - Type F63.
- Associated parameter No. 15: Activation, Very Long Outage Event preceded by a dip
  - Type F63.

Remark: For the configuration of quantities (parameters 1 to 4), the unused quantities must be placed in the last position, otherwise the product will return an error. Example of correct configuration: V1 – V2 – I3 – NONE and example of incorrect configuration V1 – NONE – V2 – I3.

#### **4.17.2 Triggering of waveforms (In Rush Mode)**

- Command word: 0x0681

Note: The waveform is only triggered if the configuration is triggered with a command word.

#### **4.17.3 Erasure of waveforms**

- Command word: 0x0682

#### **4.17.4 Pausing Power Quality measurement**

Command word to pause dips, outages and waveforms features to enable recovery without damage to data.

- Command word: 0x0683
- Setting No. 1: Activation or deactivation of the pause system.
  - Type F3.

Remark: The mode deactivates automatically after an hour.

#### **4.17.5 Recovery of a waveform period**

To recover the waveforms, a specific Modbus function has been implemented. All the information characterizing a waveform is available in the Mapping; see 6.40.

Based on this information, the client must recover the periods of a waveform quantity by quantity and period by period using specific Modbus function 102. The structure of the query is shown below:

<b>Id of the slave</b>	<b>Function</b>	<b>Id of the waveform</b>	<b>Id of the quantity</b>	<b>Number of the period</b>
Uint8	102 (uint8)	Uint32	Uint16	Uint16
1 byte	1 byte	4 bytes	2 bytes	2 bytes

The response to the query shall be presented in the following manner:

<b>Id of the slave</b>	<b>Function</b>	<b>Number of bytes</b>	<b>Id of the waveform</b>	<b>Id of the quantity</b>	<b>Number of the period</b>	<b>Gain</b>	<b>Ratio</b>	<b>Frequency</b>	<b>Number of points per cycle</b>	<b>Points No. 1</b>	<b>.</b>	<b>Points No. 64</b>
Uint8	102 (uint8)	Uint8	Uint32	Uint16	Uint16	Float	Float	Uint16 (1/100)	Uint16 (=64)	Uint16		Uint16
1 byte	1 byte	1 byte	4 bytes	2 bytes	2 bytes	4 bytes	4 bytes	2 bytes	2 bytes	2 bytes		2 bytes

We therefore have the following information:

- Start date
- The spacing between each point of a period thanks to the frequency given for each period (timestamping of points every millisecond). The spacing between each point in milliseconds: 
$$\frac{1000}{\text{Frequency} \times \text{Number\_of\_point}s\_per\_cycle}$$
- The points are in gross values
- The gain and ratio provide the physical value of each point  

$$\text{Real\_value} = \text{Gross\_value} \times \text{Gain} \times \text{Ratio}$$
- In the mapping, the cycle outage time indicates the time when the recording was stopped between period No. 145 and 146 (the first period was No. 0). This duration is given in milliseconds. If it is at 0 then there has been no outage in the recording of waveforms

## 5. APPENDIX 1: STANDARDISED TYPES

- The standardised types are tested by the product at the time of any MODBUS query. If they do not match the limits, ENERIUM 100/200 returns an error message.

<b>TYPE</b>	<b>DESIGNATION</b>	<b>FORMAT</b>	<b>MIN. LIMIT</b>	<b>MAX. LIMIT</b>
<b>F1</b>	Two ASCII characters in a 16-bit word 0xAABB	Unsigned 16-bit integer	0x2020	0x9F9F
<b>F2</b>	Language 0 = Français 1 = English 2 = Deutsch 3 = Español 4 = Italiano	Unsigned 16-bit integer	0	4
<b>F3</b>	Boolean 0 = FALSE 1 = TRUE	Unsigned 16-bit integer	0	1
<b>F4</b>	LCD Settings 0xAA = contrast 0xBB = backlight	Unsigned 16-bit integer	0x00	0xFF
<b>F5</b>	Timeout of 1 to 10s in steps of 1s	Unsigned 16-bit integer	1	10

6888h	Alarm 12 Timeout	F19	1
6889h	(empty)	-	1
688Ah	Alarm 13 Quantity	F17	1
688Bh	Alarm 13 Type	F18	1
688Ch	Alarm 13 Threshold	Signed	2
688Eh	Alarm 13 Timeout	F19	1
688Fh	(empty)	-	1
6890h	Alarm 14 Quantity	F17	1
6891h	Alarm 14 Type	F18	1
6892h	Alarm 14 Threshold	Signed	2
6894h	Alarm 14 Timeout	F19	1
6895h	(empty)	-	1
6896h	Alarm 15 Quantity	F17	1
6897h	Alarm 15 Type	F18	1
6898h	Alarm 15 Threshold	Signed	2
689Ah	Alarm 15 Timeout	F19	1
689Bh	(empty)	-	1
689Ch	Alarm 16 Quantity	F17	1
689Dh	Alarm 16 Type	F18	1
689Eh	Alarm 16 Threshold	Signed	2
68A0h	Alarm 16 Timeout	F19	1
68A1h	(empty)	-	1

## 6.7 CONFIGURATION OF GLOBAL ALARMS (R/-S)

6902h	Global Alarm 1 Equation	F22	2
6904h	Global Alarm 1 Label	F1	16
6914h	Global Alarm 2 Equation	F22	2
6916h	Global Alarm 2 Label	F1	16
6926h	Global Alarm 3 Equation	F22	2
6928h	Global Alarm 3 Label	F1	16
6938h	Global Alarm 4 Equation	F22	2
693Ah	Global Alarm 4 Label	F1	16
694Ah	Global Alarm 5 Equation	F22	2
694Ch	Global Alarm 5 Label	F1	16
695Ch	Global Alarm 6 Equation	F22	2
695Eh	Global Alarm 6 Label	F1	16
696Eh	Global Alarm 7 Equation	F22	2
6970h	Global Alarm 7 Label	F1	16
6980h	Global Alarm 8 Equation	F22	2
6982h	Global Alarm 8 Label	F1	16
6AAFh	Blinking of backlight for global alarm	F73	1

## 6.8 CONFIGURATION OF THE HMI (R/-S)

6A22h	Language	F2	1
6A23h	Scrolling	F3	1
6A24h	Timeout	F5	1
6A25h	List of scrolling screens	F6	8
6A2Dh	Password	F1	2
6A2Fh	Contrast / Backlight	F4	1
6A30h	Custom screen 1: title	F1	12
6A3Ch	Custom screen 1: labels	F1	14
6A4Ah	Custom screen 1: units	F1	8
6A52h	Custom screen 2: title	F1	12
6A5Eh	Custom screen 2: labels	F1	14
6A6Ch	Custom screen 2: units	F1	8
6A74h	Custom screen 3: title	F1	12
6A80h	Custom screen 3: labels	F1	14

Address (hex)	Name of MODBUS quantity	Format or precision	Size (words)
6A8Eh	Custom screen 3: units	F1	8
6A96h	Custom screen 1: size of the 4 data items on screen	F7	2
6A98h	Custom screen 1: precision of the 4 data items on screen	F8	2
6A9Ah	Custom screen 1: MODBUS addresses of data to display	4*Uint16	4
6A9Eh	Custom screen 2: size of the 4 data items on screen	F7	2
6AA0h	Custom screen 2: precision of the 4 data items on screen	F8	2
6AA2h	Custom screen 2: MODBUS addresses of data to display	4*Uint16	4
6AA6h	Custom screen 3: size of the 4 data items on screen	F7	2
6AA8h	Custom screen 3: precision of the 4 data items on screen	F8	2
6AAAh	Custom screen 3: MODBUS addresses of data to display	4*Uint16	4
6AAEh	Backlight level in standby mode	[0..255]	1

## 6.9 CONFIGURATION OF DIGITAL OUTPUTS (R/-S)

6AB6h	Pulse width (common to all boards)	F29	1
SLOT A		-	
6AB7h	Mode of output 1	F38	1
6AB8h	Weight of output 1	F26	1
6AB9h	Level of activation of output 1	F27	1
6ABAh	Energy or Alarm associated with output 1	[0..8] or F28	1
6ABBh	Mode of output 2	F38	1
6ABCCh	Weight of output 2	F26	1
6ABDh	Level of activation of output 2	F27	1
6ABEh	Energy or Alarm associated with output 2	[0..8] or F28	1
6ABFh	SLOT B		8
6AC7h	SLOT C		8
6ACFh	SLOT D		8

## 6.10 CONFIGURATION OF DIGITAL INPUTS (R/-S)

6B00h	Slot used for the Time sync	F23	1
6B01h	Input used for the Time sync	F24	1
SLOT A		-	
6B02h	Weight of input 1	F42	2
6B04h	Mode of input 1	F25	1
6B05h	Label of input 1	F1	16
6B15h	Unit of input 1	F1	4
6B19h	(empty)	-	1
6B1Ah	Weight of input 2	F42	2
6B1Ch	Mode of input 2	F25	1
6B1Dh	Label of input 2	F1	16
6B2Dh	Unit of input 2	F1	4
6B31h	(empty)		1
6B32h	SLOT B		48
6B62h	SLOT C		48
6B92h	SLOT D		48

## 6.11 CONFIGURATION OF ANALOGUE OUTPUTS (R/-S)

6C8Ah	Overshoot value	F35	1
6C8Bh	<i>Free for alignment</i>	-	
SLOT A		-	
6C8Ch	Output 1 quantity	F43	1
6C8Dh	Type of quantity	F44	1
6C8Eh	Output 1 min. quantity	Signed	2
6C90h	Output 1 max. quantity	Signed	2
6C92h	Output 1 min. current	[-22000..+22000]	1
6C93h	Output 1 max. current	[-22000..+22000]	1

Address (hex)	Name of MODBUS quantity	Format or precision	Size (words)
6C94h	Output 2 quantity	F43	1
6C95h	Type of quantity	F44	1
6C96h	Output 2 min. quantity	Signed	2
6C98h	Output 2 max. quantity	Signed	2
6C9Ah	Output 2 min. current	[-22000..+22000]	1
6C9Bh	Output 2 max. current	[-22000..+22000]	1
6C9Ch	SLOT B		16
6CACh	SLOT C		16
6CBCh	SLOT D		16

## 6.12 CONFIGURATION OF THE METROLOGY LED (R/-S)

6840h	Quantity	F46	1
-------	----------	-----	---

## 6.13 1s MEASUREMENTS (R/-/-)

0500h	V1	Unsigned 1/100 (V)	2
0502h	V2	Unsigned 1/100 (V)	2
0504h	V3	Unsigned 1/100 (V)	2
0506h	Vearth	Unsigned 1/100 (V)	2
0508h	U12	Unsigned 1/100 (V)	2
050Ah	U23	Unsigned 1/100 (V)	2
050Ch	U31	Unsigned 1/100 (V)	2
050Eh	I1	Unsigned 1/10000 (A)	2
0510h	I2	Unsigned 1/10000 (A)	2
0512h	I3	Unsigned 1/10000 (A)	2
0514h	In	Unsigned 1/10000 (A)	2
0516h	P1	Signed (W)	2
0518h	P2	Signed (W)	2
051Ah	P3	Signed (W)	2
051Ch	Pt	Signed (W)	2
051Eh	Q1	Signed (var)	2
0520h	Q2	Signed (var)	2
0522h	Q3	Signed (var)	2
0524h	Qt	Signed (var)	2
0526h	S1	Unsigned (VA)	2
0528h	S2	Unsigned (VA)	2
052Ah	S3	Unsigned (VA)	2
052Ch	St	Unsigned (VA)	2
052Eh	FP1	Signed 1/100 (%)	1
052Fh	FP1 Quadrant	F39	1
0530h	FP2	Signed 1/100 (%)	1
0531h	FP2 Quadrant	F39	1
0532h	FP3	Signed 1/100 (%)	1
0533h	FP3 Quadrant	F39	1
0534h	FPt	Signed 1/100 (%)	1
0535h	FPt Quadrant	F39	1
0536h	Cos phi phase 1	Signed 1/10000 ()	1
0537h	Quadrant	F39	1
0538h	Cos phi phase 2	Signed 1/10000 ()	1
0539h	Quadrant	F39	1
053Ah	Cos phi phase 3	Signed 1/10000 ()	1
053Bh	Quadrant	F39	1
053Ch	Three-phase cos phi	Signed 1/10000 ()	1
053Dh	Quadrant	F39	1
053Eh	V1 Peak factor	Unsigned 1/10000 ()	1
053Fh	V2 Peak factor	Unsigned 1/10000 ()	1
0540h	V3 Peak factor	Unsigned 1/10000 ()	1
0541h	I1 Peak factor	Unsigned 1/10000 ()	1

Address (hex)	Name of MODBUS quantity	Format or precision	Size (words)
0542h	I2 Peak factor	Unsigned 1/10000 ( )	1
0543h	I3 Peak factor	Unsigned 1/10000 ( )	1
0544h	Voltage unbalance	Signed 1/100 (%)	1
0545h	Frequency	Unsigned 1/100 (Hz)	1
0546h	Total tan phi	Signed 1/10000	2

## 6.14 10S MEASUREMENTS (R/-I/-)

0548h	Frequency	Unsigned 1/100 (Hz)	1
-------	-----------	---------------------	---

## 6.15 MINIMA FOR 1S VALUES (R/-S-OUTAGE-PROOF)

0AE4h	Minima of V1	Unsigned 1/100 (V)	2
0AE6h	Date of minima of V1	F15	2
0AE8h	Minima of V2	Unsigned 1/100 (V)	2
0AEAh	Date of minima of V2	F15	2
0AECh	Minima of V3	Unsigned 1/100 (V)	2
0AEEh	Date of minima of V3	F15	2
0AF0h	Minima of VT	Unsigned 1/100 (V)	2
0AF2h	Date of minima of VT	F15	2
0AF4h	Minima of U12	Unsigned 1/100 (V)	2
0AF6h	Date of minima of U12	F15	2
0AF8h	Minima of U23	Unsigned 1/100 (V)	2
0AFAh	Date of minima of U23	F15	2
0AFCh	Minima of U31	Unsigned 1/100 (V)	2
0AFEh	Date of minima of U31	F15	2
0B00h	Minima of I1	Unsigned 1/10000 (A)	2
0B02h	Date of minima of I1	F15	2
0B04h	Minima of I2	Unsigned 1/10000 (A)	2
0B06h	Date of minima of I2	F15	2
0B08h	Minima of I3	Unsigned 1/10000 (A)	2
0B0Ah	Date of minima of I3	F15	2
0B0Ch	Minima of In	Unsigned 1/10000 (A)	2
0B0Eh	Date of minima of In	F15	2
0B10h	Minima of Pt, receiver mode	Unsigned (W)	2
0B12h	Date of minima of Pt, receiver mode	F15	2
0B14h	Minima of Pt, generator mode	Unsigned (W)	2
0B16h	Date of minima of Pt, generator mode	F15	2
0B18h	Minima of Qt, receiver mode	Signed (var)	2
0B1Ah	Date of minima of Qt, receiver mode	F15	2
0B1Ch	Minima of Qt, generator mode	Signed (var)	2
0B1Eh	Date of minima of Qt, generator mode	F15	2
0B20h	Minima of frequency	Unsigned 1/100 (Hz)	2
0B22h	Date of minima of frequency	F15	2
0C44h	Minima of St	Unsigned (VA)	2
0C46h	Date of minima of St	F15	2
0C60h	Minimum analogue input for slot A, channel 1	Signed	2
0C62h	Date of minimum analogue input for slot A, channel 1	F15	2
0C64h	Minimum analogue input for slot A, channel 2	Signed	2
0C66h	Date of minimum analogue input for slot A, channel 2	F15	2
0C68h	Minimum analogue input for slot B, channel 1	Signed	2
0C6Ah	Date of minimum analogue input for slot B, channel 1	F15	2
0C6Ch	Minimum analogue input for slot B, channel 2	Signed	2
0C6Eh	Date of minimum analogue input for slot B, channel 2	F15	2
0C70h	Minimum analogue input for slot C, channel 1	Signed	2
0C72h	Date of minimum analogue input for slot C, channel 1	F15	2
0C74h	Minimum analogue input for slot C, channel 2	Signed	2
0C76h	Date of minimum analogue input for slot C, channel 2	F15	2
0C78h	Minimum analogue input for slot D, channel 1	Signed	2

Address (hex)	Name of MODBUS quantity	Format or precision	Size (words)
0C7Ah	Date of minimum analogue input for slot D, channel 1	F15	2
0C7Ch	Minimum analogue input for slot D, channel 2	Signed	2
0C7Eh	Date of minimum analogue input for slot D, channel 2	F15	2

## 6.16 MINIMA OF THE MEAN VALUES (R/-S-OUTAGE-PROOF)

0B24h	Minima of mean FPt, receiver mode	Unsigned 1/10000 ()	1
0B25h	Quadrant of the minima of mean FPt, receiver mode	F39	1
0B26h	Date of the minima of mean FPt, receiver mode	F15	2
0B28h	Minima of mean FPt, generator mode	Signed 1/10000 ()	1
0B29h	Quadrant of the minima of mean FPt, generator mode	F39	1
0B2Ah	Date of the minima of mean FPt, generator mode	F15	2
0B2Ch	Minima of the mean three-phase Cos Phi, receiver mode	Unsigned 1/10000 ()	1
0B2Dh	Quadrant of the minima of the mean three-phase Cos Phi, receiver mode	F39	1
0B2Eh	Date of the minima of the mean three-phase Cos Phi, receiver mode	F15	2
0B30h	Minima of the mean three-phase Cos Phi, generator mode	Signed 1/10000 ()	1
	Quadrant of the minima of the mean three-phase Cos Phi, generator mode		
0B31h		F39	1
0B32h	Date of the minima of the mean three-phase Cos Phi, generator mode	F15	2
0C4Ch	Minimum of mean tan phi, receiver mode	signed 1/10000 ()	2
0C4Eh	Date of the minimum of mean tan phi, receiver mode	F15	2
0C50h	Minimum of mean tan phi, generator mode	signed 1/10000 ()	2
0C52h	Date of the minimum of mean tan phi, generator mode	F15	2
0CE0h	Mean minimum analogue input for slot A, channel 1	Signed	2
0CE2h	Date of mean minimum analogue input for slot A, channel 1	F15	2
0CE4h	Mean minimum analogue input for slot A, channel 2	Signed	2
0CE6h	Date of mean minimum analogue input for slot A, channel 2	F15	2
0CE8h	Mean minimum analogue input for slot B, channel 1	Signed	2
0CEAh	Date of mean minimum analogue input for slot B, channel 1	F15	2
0CECh	Mean minimum analogue input for slot B, channel 2	Signed	2
0CEEh	Date of mean minimum analogue input for slot B, channel 2	F15	2
0CF0h	Mean minimum analogue input for slot C, channel 1	Signed	2
0CF2h	Date of mean minimum analogue input for slot C, channel 1	F15	2
0CF4h	Mean minimum analogue input for slot C, channel 2	Signed	2
0CF6h	Date of mean minimum analogue input for slot C, channel 2	F15	2
0CF8h	Mean minimum analogue input for slot D, channel 1	Signed	2
0CFAh	Date of mean minimum analogue input for slot D, channel 1	F15	2
0CFCh	Mean minimum analogue input for slot D, channel 2	Signed	2
0CFEh	Date of mean minimum analogue input for slot D, channel 2	F15	2

## 6.17 MAXIMA FOR 1S VALUES (R/-S-OUTAGE-PROOF)

0B34h	Maxima of V1	Unsigned 1/100 (V)	2
0B36h	Date of maxima of V1	F15	2
0B38h	Maxima of V2	Unsigned 1/100 (V)	2
0B3Ah	Date of maxima of V2	F15	2
0B3Ch	Maxima of V3	Unsigned 1/100 (V)	2
0B3Eh	Date of maxima of V3	F15	2
0B40h	Maxima of VT	Unsigned 1/100 (V)	2
0B42h	Date of maxima of VT	F15	2
0B44h	Maxima of U12	Unsigned 1/100 (V)	2
0B46h	Date of maxima of U12	F15	2
0B48h	Maxima of U23	Unsigned 1/100 (V)	2
0B4Ah	Date of maxima of U23	F15	2
0B4Ch	Maxima of U31	Unsigned 1/100 (V)	2
0B4Eh	Date of maxima of U31	F15	2
0B50h	Maxima of I1	Unsigned 1/10000 (A)	2
0B52h	Date of maxima of I1	F15	2
0B54h	Maxima of I2	Unsigned 1/10000 (A)	2

Address (hex)	Name of MODBUS quantity	Format or precision	Size (words)
0B56h	Date of maxima of I2	F15	2
0B58h	Maxima of I3	Unsigned 1/10000 (A)	2
0B5Ah	Date of maxima of I3	F15	2
0B5Ch	Maxima of In	Unsigned 1/10000 (A)	2
0B5Eh	Date of maxima of In	F15	2
0B60h	Maxima of P1, receiver mode	Unsigned (W)	2
0B62h	Date of maxima of P1, receiver mode	F15	2
0B64h	Maxima of P1, generator mode	Unsigned (W)	2
0B66h	Date of maxima of P1, generator mode	F15	2
0B68h	Maxima of P2, receiver mode	Unsigned (W)	2
0B6Ah	Date of maxima of P2, receiver mode	F15	2
0B6Ch	Maxima of P2, generator mode	Unsigned (W)	2
0B6Eh	Date of maxima of P2, generator mode	F15	2
0B70h	Maxima of P3, receiver mode	Unsigned (W)	2
0B72h	Date of maxima of P3, receiver mode	F15	2
0B74h	Maxima of P3, generator mode	Unsigned (W)	2
0B76h	Date of maxima of P3, generator mode	F15	2
0B78h	Maxima of Pt, receiver mode	Unsigned (W)	2
0B7Ah	Date of maxima of Pt, receiver mode	F15	2
0B7Ch	Maxima of Pt, generator mode	Unsigned (W)	2
0B7Eh	Date of maxima of Pt, generator mode	F15	2
0B80h	Maxima of Q1, receiver mode	Signed (var)	2
0B82h	Date of maxima of Q1, receiver mode	F15	2
0B84h	Maxima of Q1, generator mode	Signed (var)	2
0B86h	Date of maxima of Q1, generator mode	F15	2
0B88h	Maxima of Q2, receiver mode	Signed (var)	2
0B8Ah	Date of maxima of Q2, receiver mode	F15	2
0B8Ch	Maxima of Q2, generator mode	Signed (var)	2
0B8Eh	Date of maxima of Q2, generator mode	F15	2
0B90h	Maxima of Q3, receiver mode	Signed (var)	2
0B92h	Date of maxima of Q3, receiver mode	F15	2
0B94h	Maxima of Q3, generator mode	Signed (var)	2
0B96h	Date of maxima of Q3, generator mode	F15	2
0B98h	Maxima of Qt, receiver mode	Signed (var)	2
0B9Ah	Date of maxima of Qt, receiver mode	F15	2
0B9Ch	Maxima of Qt, generator mode	Signed (var)	2
0B9Eh	Date of maxima of Qt, generator mode	F15	2
0BA0h	Maxima of S1	Unsigned (VA)	2
0BA2h	Date of maxima of S1	F15	2
0BA4h	Maxima of S2	Unsigned (VA)	2
0BA6h	Date of maxima of S2	F15	2
0BA8h	Maxima of S3	Unsigned (VA)	2
0BAAh	Date of maxima of S3	F15	2
0BACCh	Maxima of St	Unsigned (VA)	2
0BAEh	Date of maxima of St	F15	2
0BB0h	Maxima of frequency	Unsigned 1/100 (Hz)	2
0BB2h	Date of maxima of frequency	F15	2
0CA0h	Maximum analogue input for slot A, channel 1	Signed	2
0CA2h	Date of maximum analogue input for slot A, channel 1	F15	2
0CA4h	Maximum analogue input for slot A, channel 2	Signed	2
0CA6h	Date of maximum analogue input for slot A, channel 2	F15	2
0CA8h	Maximum analogue input for slot B, channel 1	Signed	2
0CAAh	Date of maximum analogue input for slot B, channel 1	F15	2
0CACh	Maximum analogue input for slot B, channel 2	Signed	2
0CAEh	Date of maximum analogue input for slot B, channel 2	F15	2
0CB0h	Maximum analogue input for slot C, channel 1	Signed	2
0CB2h	Date of maximum analogue input for slot C, channel 1	F15	2
0CB4h	Maximum analogue input for slot C, channel 2	Signed	2
0CB6h	Date of maximum analogue input for slot C, channel 2	F15	2
0CB8h	Maximum analogue input for slot D, channel 1	Signed	2
0CBAh	Date of maximum analogue input for slot D, channel 1	F15	2
0CBCh	Maximum analogue input for slot D, channel 2	Signed	2

Address (hex)	Name of MODBUS quantity	Format or precision	Size (words)
0CBEh	Date of maximum analogue input for slot D, channel 2	F15	2

## 6.18 MAXIMA OF THE MEAN VALUES (R/-/S-OUTAGE-PROOF)

0BB4h	Maxima of mean V1	Unsigned 1/100 (V)	2
0BB6h	Date of maxima of mean V1	F15	2
0BB8h	Maxima of mean V2	Unsigned 1/100 (V)	2
0BBAh	Date of maxima of mean V2	F15	2
0BBCh	Maxima of mean V3	Unsigned 1/100 (V)	2
0BBEh	Date of maxima of mean V3	F15	2
0BC0h	Maxima of mean VT	Unsigned 1/100 (V)	2
0BC2h	Date of maxima of mean VT	F15	2
0BC4h	Maxima of mean U12	Unsigned 1/100 (V)	2
0BC6h	Date of maxima of mean U12	F15	2
0BC8h	Maxima of mean U23	Unsigned 1/100 (V)	2
0BCAh	Date of maxima of mean U23	F15	2
0BCCh	Maxima of mean U31	Unsigned 1/100 (V)	2
0BCEh	Date of maxima of mean U31	F15	2
0BD0h	Maxima of mean I1	Unsigned 1/10000 (A)	2
0BD2h	Date of maxima of mean I1	F15	2
0BD4h	Maxima of mean I2	Unsigned 1/10000 (A)	2
0BD6h	Date of maxima of mean I2	F15	2
0BD8h	Maxima of mean I3	Unsigned 1/10000 (A)	2
0BDAh	Date of maxima of mean I3	F15	2
0BDCh	Maxima of mean In	Unsigned 1/10000 (A)	2
0BDEh	Date of maxima of mean In	F15	2
0BE0h	Maxima of mean Pt, receiver mode	Unsigned (W)	2
0BE2h	Date of maxima of mean Pt, receiver mode	F15	2
0BE4h	Maxima of mean Pt, generator mode	Unsigned (W)	2
0BE6h	Date of maxima of mean Pt, generator mode	F15	2
0BE8h	Maxima of mean Qt, receiver mode	Signed (var)	2

6DDDh	<i>Free for alignment</i>	-	-

## 6.27 STATUS OF THE RECORDING CURVES (R/-/-)

1300h	Status, Curve No. 1	F53	1
1301h	Level of filling, Curve No. 1	Unsigned integer, in %	1
1302h	Number of elements in buffer, Curve No. 1	Unsigned	1
1303h	Number of elements since event marker, Curve No. 1	Unsigned	1
1304h	Status, Curve No. 2	F53	1
1305h	Level of filling, Curve No. 2	Unsigned integer, in %	1
1306h	Number of elements in buffer, Curve No. 2	Unsigned	1
1307h	Number of elements since event marker, Curve No. 2	Unsigned	1
1308h	Status, Curve No. 3	F53	1
1309h	Level of filling, Curve No. 3	Unsigned integer, in %	1
130Ah	Number of elements in buffer, Curve No. 3	Unsigned	1
130Bh	Number of elements since event marker, Curve No. 3	Unsigned	1
130Ch	Status, Curve No. 4	F53	1
130Dh	Level of filling, Curve No. 4	Unsigned integer, in %	1
130Eh	Number of elements in buffer, Curve No. 4	Unsigned	1
130Fh	Number of elements since event marker, Curve No. 4	Unsigned	1
1310h	<i>Free for alignment</i>	-	16

## 6.28 DATA OF RECORDING CURVES

1320h	Curve No. / displayed block No.	F47 / F49	1
1321h	Level of filling, Curve No. x	Unsigned integer, in %	1
1322h	Number of elements in buffer, Curve No. x	Unsigned	1
1323h	Number of elements since event marker, Curve No. x	Unsigned	1
1324h	Consecutive element structures (1 date + n 32-bit quantities)	Same type as the quantity	2016

## 6.29 CONFIGURATION OF LOAD CURVES (R/-/S)

7000h	Load curve integration time	F55	1
7001h	Quantities set	F56	1
7002h	Load curve unit - SLOT A, channel 1	F1	4
7006h	Load curve unit - SLOT A, channel 2	F1	4
700Ah	Load curve unit - SLOT B, channel 1	F1	4
700Eh	Load curve unit - SLOT B, channel 2	F1	4
7012h	Load curve unit - SLOT C, channel 1	F1	4
7016h	Load curve unit - SLOT C, channel 2	F1	4
701Ah	Load curve unit - SLOT D, channel 1	F1	4
701Eh	Load curve unit - SLOT D, channel 2	F1	4

Address (hex)	Name of MODBUS quantity	Format or precision	Size (words)
<b>6.30 LOAD CURVES (R/-S-OUTAGE-PROOF)</b>			
2300h	Date	F15	2
2302h	Quantities set	F56	1
2303h	Event flags + LcId number	F72	1
2304h	Quantity 1	Signed 32-bit	2
2306h	Quantity 2	Signed 32-bit	2
...			
(consecutive blocks, max. size = 11,520 words)			

<b>6.31 FIFO STACK OF LOAD CURVES (R/-S-OUTAGE-PROOF)</b>			
6300h	LcId (load curve identifier)	Uint16	1
6301h	Status word, load curve	F56	1
6302h	LcId start date	F15	2
6304h	LcId end date	F15	2
6306h	Load curve integration time	F55	1
6307h	(Not used)	-	1
6308h	Stack (index 1 to 31)	-	248

<b>6.32 CONFIGURATION OF ANALOGUE INPUTS</b>			
6E34h	Slot A channel 1: minimum analogue input (mA)	Uint16	1
6E35h	Slot A channel 1: maximum analogue input (mA)	Uint16	1
6E36h	Slot A channel 1: value associated with the minimum analogue input	Signed 32-bit	2
6E38h	Slot A channel 1: value associated with the maximum analogue input	Signed 32-bit	2
6E3Ah	Label, slot A channel 1	F1	16
6E4Ah	Unit, slot A channel 1	F1	4
6E4Eh	Slot A channel 2: minimum analogue input (mA)	Uint16	1
6E4Fh	Slot A channel 2: maximum analogue input (mA)	Uint16	1
6E50h	Slot A channel 2: value associated with the minimum analogue input	Signed 32-bit	2
6E52h	Slot A channel 2: value associated with the maximum analogue input	Signed 32-bit	2
6E54h	Label, slot A channel 2	F1	16
6E64h	Unit, slot A channel 2	F1	4
6E68h	Slot B channel 1: minimum analogue input (mA)	Uint16	1
6E69h	Slot B channel 1: maximum analogue input (mA)	Uint16	1
6E6Ah	Slot B channel 1: value associated with the minimum analogue input	Signed 32-bit	2
6E6Ch	Slot B channel 1: value associated with the maximum analogue input	Signed 32-bit	2
6E6Eh	Label, slot B channel 1	F1	16
6E7Eh	Unit, slot B channel 1	F1	4
6E82h	Slot B channel 2: minimum analogue input (mA)	Uint16	1
6E83h	Slot B channel 2: maximum analogue input (mA)	Uint16	1
6E84h	Slot B channel 2: value associated with the minimum analogue input	Signed 32-bit	2
6E86h	Slot B channel 2: value associated with the maximum analogue input	Signed 32-bit	2
6E88h	Label, slot B channel 2	F1	16
6E98h	Unit, slot B channel 2	F1	4
6E9Ch	Slot C channel 1: minimum analogue input (mA)	Uint16	1
6E9Dh	Slot C channel 1: maximum analogue input (mA)	Uint16	1
6E9Eh	Slot C channel 1: value associated with the minimum analogue input	Signed 32-bit	2
6EA0h	Slot C channel 1: value associated with the maximum analogue input	Signed 32-bit	2
6EA2h	Label, slot C channel 1	F1	16
6EB2h	Unit, slot C channel 1	F1	4
6EB6h	Slot C channel 2: minimum analogue input (mA)	Uint16	1
6EB7h	Slot C channel 2: maximum analogue input (mA)	Uint16	1
6EB8h	Slot C channel 2: value associated with the minimum analogue input	Signed 32-bit	2
6EBAh	Slot C channel 2: value associated with the maximum analogue input	Signed 32-bit	2
6EBCh	Label, slot C channel 2	F1	16
6ECCh	Unit, slot C channel 2	F1	4

Address (hex)	Name of MODBUS quantity	Format or precision	Size (words)
6ED0h	Slot D channel 1: minimum analogue input (mA)	Uint16	1
6ED1h	Slot D channel 1: maximum analogue input (mA)	Uint16	1
6ED2h	Slot D channel 1: value associated with the minimum analogue input	Signed 32-bit	2
6ED4h	Slot D channel 1: value associated with the maximum analogue input	Signed 32-bit	2
6ED6h	Label, slot D channel 1	F1	16
6EE6h	Unit, slot D channel 1	F1	4
6EEAh	Slot D channel 2: minimum analogue input (mA)	Uint16	1
6EEBh	Slot D channel 2: maximum analogue input (mA)	Uint16	1
6EECh	Slot D channel 2: value associated with the minimum analogue input	Signed 32-bit	2
6EEEh	Slot D channel 2: value associated with the maximum analogue input	Signed 32-bit	2
6EF0h	Label, slot D channel 2	F1	16
6F00h	Unit, slot D channel 2	F1	4

### 6.33 ANALOGUE INPUTS

0D68h	Value, slot A channel 1	Signed 32-bit	2
0D6Ah	Value, slot A channel 2	Signed 32-bit	2
0D6Ch	Value, slot B channel 1	Signed 32-bit	2
0D6Eh	Value, slot B channel 2	Signed 32-bit	2
0D70h	Value, slot C channel 1	Signed 32-bit	2
0D72h	Value, slot C channel 2	Signed 32-bit	2
0D74h	Value, slot D channel 1	Signed 32-bit	2
0D76h	Value, slot D channel 2	Signed 32-bit	2

### 6.34 CONFIGURATION, DIPS / OUTAGES / OVERVOLTAGE / OVERCURRENT (FOR ENERIUM 300 ONLY)

6DFAh	Activation of configuration of dips and outages V1	Unsigned	1
6DFBh	Activation of configuration of dips and outages V2	Unsigned	1
6DFCh	Activation of configuration of dips and outages V3	Unsigned	1
6DFDh	Activation of configuration of dips and outages U12	Unsigned	1
6DFEh	Activation of configuration of dips and outages U23	Unsigned	1
6DFFh	Activation of configuration of dips and outages U31	Unsigned	1
6E00h	Activation of configuration of dips and outages I1	Unsigned	1
6E01h	Activation of configuration of dips and outages I2	Unsigned	1
6E02h	Activation of configuration of dips and outages I3	Unsigned	1
6E03h	Voltage hysteresis in %	Unsigned	1
6E04h	Voltage outage threshold in % primary PT	Unsigned	1
6E05h	Voltage dip threshold in % primary PT	Unsigned	1
6E06h	Overvoltage threshold in % primary PT	Unsigned	1
6E07h	Current hysteresis in %	Unsigned	1
6E08h	RESERVED	Unsigned	1
6E09h	RESERVED	Unsigned	1
6E0Ah	Overcurrent threshold in % primary CT	Unsigned	1
6E0Ch	Threshold between very short outage and short outage in milliseconds	Unsigned	2
6E0Eh	Threshold between a short outage and long outage in milliseconds	Unsigned	2
6E10h	number of transitions for the detection of outages	Unsigned	1
6E11h	Reserved	-	1

### 6.35 DIPS / OUTAGES / OVERVOLTAGE / OVERCURRENT (FOR ENERIUM 300 ONLY)

8000h	Index of the last event	Unsigned	2
	Event 1		
8002h	Event start date (seconds)	Unsigned	2
8004h	Extension of the event start date (milliseconds)	Unsigned	1
8005h	Quantity	F67	1

Address (hex)	Name of MODBUS quantity	Format or precision	Size (words)
8006h	Event duration in milliseconds	Unsigned	2
8008h	Extremum (in the quantity unit)	Unsigned	2
800Ah	Event type	F69	2
800Ch	Associated waveform identifier	Unsigned	2
800Eh	Event 2 at 1023	Event	1020
	Event 1024		
AFF6h	Event start date (seconds)	Unsigned	2
AFF8h	Extension of the event start date (milliseconds)	Unsigned	1
AFF9h	Quantity	F67	1
AFFAh	Event duration in milliseconds	Unsigned	2
AFFCh	Extremum (in the quantity unit)	Unsigned	2
AFFEh	Event type	F69	2
B000h	Associated waveform identifier	Unsigned	2

### 6.36 DIPS / OUTAGES / OVERVOLTAGE / OVERCURRENT UNDERWAY (FOR ENERIUM 300 ONLY)

	Event V1		
B002h	Event start date (seconds)	Unsigned	2
B004h	Extension of the event start date (milliseconds)	Unsigned	1
B005h	Quantity	F67	1
B006h	Event duration in milliseconds	Unsigned	2
B008h	Extremum (in the quantity unit)	Unsigned	2
B00Ah	Event type	F69	2
B00Ch	Associated waveform identifier	Unsigned	2
	Event V2		
B00Eh	Event start date (seconds)	Unsigned	2
B010h	Extension of the event start date (milliseconds)	Unsigned	1
B011h	Quantity	F67	1
B012h	Event duration in milliseconds	Unsigned	2
B014h	Extremum (in the quantity unit)	Unsigned	2
B016h	Event type	F69	2
B018h	Associated waveform identifier	Unsigned	2
	Event V3		
B01Ah	Event start date (seconds)	Unsigned	2
B01Ch	Extension of the event start date (milliseconds)	Unsigned	1
B01Dh	Quantity	F67	1
B01Eh	Event duration in milliseconds	Unsigned	2
B020h	Extremum (in the quantity unit)	Unsigned	2
B022h	Event type	F69	2
B024h	Associated waveform identifier	Unsigned	2
	Event U12		
B026h	Event start date (seconds)	Unsigned	2
B028h	Extension of the event start date (milliseconds)	Unsigned	1
B029h	Quantity	F67	1
B02Ah	Event duration in milliseconds	Unsigned	2
B02Ch	Extremum (in the quantity unit)	Unsigned	2
B02Eh	Event type	F69	2
B030h	Associated waveform identifier	Unsigned	2
	Event U23		
B032h	Event start date (seconds)	Unsigned	2
B034h	Extension of the event start date (milliseconds)	Unsigned	1
B035h	Quantity	F67	1
B036h	Event duration in milliseconds	Unsigned	2
B038h	Extremum (in the quantity unit)	Unsigned	2
B03Ah	Event type	F69	2
B03Ch	Associated waveform identifier	Unsigned	2
	Event U31		
B03Eh	Event start date (seconds)	Unsigned	2
B040h	Extension of the event start date (milliseconds)	Unsigned	1
B041h	Quantity	F67	1

Address (hex)	Name of MODBUS quantity	Format or precision	Size (words)
B042h	Event duration in milliseconds	Unsigned	2
B044h	Extremum (in the quantity unit)	Unsigned	2
B046h	Event type	F69	2
B048h	Associated waveform identifier	Unsigned	2
Event II			
B04Ah	Event start date (seconds)	Unsigned	2
B04Ch	Extension of the event start date (milliseconds)	Unsigned	1
B04Dh	Quantity	F67	1
B04Eh	Event duration in milliseconds	Unsigned	2
B050h	Extremum (in the quantity unit)	Unsigned	2
B052h	Event type	F69	2
B054h	Associated waveform identifier	Unsigned	2
Event I2			
B056h	Event start date (seconds)	Unsigned	2
B058h	Extension of the event start date (milliseconds)	Unsigned	1
B059h	Quantity	F67	1
B05Ah	Event duration in milliseconds	Unsigned	2
B05Ch	Extremum (in the quantity unit)	Unsigned	2
B05Eh	Event type	F69	2
B060h	Associated waveform identifier	Unsigned	2
Event I3			
B062h	Event start date (seconds)	Unsigned	2
B064h	Extension of the event start date (milliseconds)	Unsigned	1
B065h	Quantity	F67	1
B066h	Event duration in milliseconds	Unsigned	2
B068h	Extremum (in the quantity unit)	Unsigned	2
B06Ah	Event type	F69	2
B06Ch	Associated waveform identifier	Unsigned	2

### 6.37 CONFIGURATION OF EN50160 STATISTICS TABLE (FOR ENERIUM 300 ONLY)

6D46h	Threshold 1, frequency compliance	Signed 1/10 (%)	1

B285h	U31 harmonics 22 rate for week minus 1	Unsigned 1/100 (%)	1
B286h	U31 harmonics 23 rate for week minus 1	Unsigned 1/100 (%)	1
B287h	U31 harmonics 24 rate for week minus 1	Unsigned 1/100 (%)	1
B288h	U31 harmonics 25 rate for week minus 1	Unsigned 1/100 (%)	1
B289h	Value of aggregation period for the week minus 1	F33	1
B28Ah	Type of wiring used for the Stats for the week minus 1	F74	1

## 6.39 CONFIGURATION OF WAVEFORMS (FOR ENERIUM 300 ONLY)

6FE0h	Quantity No. 1	F75	1
6FE1h	Quantity No. 2	F75	1
6FE2h	Quantity No. 3	F75	1
6FE3h	Quantity No. 4	F75	1
6FE4h	Command Word Activation	F63	1
6FE5h	Sync Input Activation	F63	1
6FE6h	RESERVED (always at 0)		1
6FE7h	RESERVED		1
6FE8h	Dips Activation	F63	1
6FE9h	Very short outage activation	F63	1
6FEAh	Short outage activation	F63	1
6FEBh	Long outage activation	F63	1
6FECh	Very short outage preceded by a dip activation	F63	1
6FEDh	Short outage preceded by a dip activation	F63	1
6FEEh	Long outage preceded by a dip activation	F63	1
6FEFh	RESERVED (always at 0)		1
6FF0h	RESERVED (always at 0)		1
6FF1h	Overshoot Activation	F63	1
6FF2h	Overcurrent Activation	F63	1

## 6.40 WAVEFORMS (FOR ENERIUM 300 ONLY)

B28Ch	Last waveform identifier	Unsigned	2
Waveform No. 1			
B28Eh	Waveform identifier	Unsigned	2
B290h	Duration (in milliseconds)	Unsigned	2
B292h	Start date (in seconds)	Unsigned	2
B294h	Extension of the start date (in milliseconds)	Unsigned	1
B295h	Information	F77	1
B296h	Number of points per cycle	Unsigned	1
B297h	Number of cycles	Unsigned	1
B299h	Duration of cycle outage (between cycle No. 146 and No. 147) (in milliseconds)	Unsigned	2

ADDRESS (HEX)	NAME OF THE MODBUS QUANTITY	FORMAT OR PRECISION	SIZE (WORDS)
B29Ah	Number of quantities contained in the waveform	Unsigned	1
B29Bh	Quantity No. 1	F75	1
B29Ch	Quantity No. 2	F75	1
B29Dh	Quantity No. 3	F75	1
B29Eh	Quantity No. 4	F75	1
B29Fh	Type of trigger	F76	1
B2A0h	Dip / outage triggering event	F78	2

Waveform No. 16			
B3BAh	Waveform identifier	Unsigned	2
B3BCh	Duration (in milliseconds)	Unsigned	2
B3BEh	Start date (in seconds)	Unsigned	2

B3C0h	Extension of the start date (in milliseconds)	Unsigned	1
B3C1h	Information	F77	1
B3C2h	Number of points per cycle	Unsigned	1
B3C3h	Number of cycles	Unsigned	1
B3C4h	Duration of cycle outage (between cycle No. 146 and No. 147) (in milliseconds)	Unsigned	2
B3C6h	Number of quantities contained in the waveform	Unsigned	1
B3C7h	Quantity No. 1	F75	1
B3C8h	Quantity No. 2	F75	1
B3C9h	Quantity No. 3	F75	1
B3CAh	Quantity No. 4	F75	1
B3CBh	Type of trigger	F76	1
B3CCh	Dip / outage triggering event	F78	2
