Smart Lighting Summit

Tuesday 19 April 2016, **The Crystal, London**

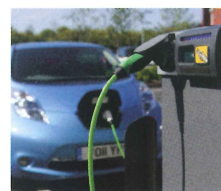

Discussing the latest in lighting controls

Energy efficiency, LED control,
emergency lighting and more

BIM

Making the
most of the BIM
opportunity

Electric vehicles

Fuelling the EV
revolution

Innovative Electronic
Systems Protection.
Can you afford a
6,000 volt shock to
your systems?

Lightning can be devastating, from up to 1km away a single lightning strike injects up to 6,000 volts on to the power, data and phone lines running straight into the electronic systems at the heart of your organisation, destroying data and components. Furse, a world leader in lightning protection and earthing, can prevent this by offering a renowned range of intelligent electronic system protection (ESP) devices that meet the new BS EN 62305 standards. www.furse.com

6 new CHAUVIN ARNOUX insulation and continuity testers

**CHAUVIN®
ARNOUX**
CHAUVIN ARNOUX GROUP

- Industrial maintenance, electronics, telecommunications, other special applications
- Test voltage from 10 V to 1,000 V / 200 GΩ
- Manuel, Lock, Timer and PI / DAR ratio modes
- Visual Pass / Fail indication (red / green)
- Measurements stored in memory
